# INTRODUCTION

---

## Purpose

This guide describes a programming method for the OfficeServ 500 system users. OfficeServ 500 allows you to utilize a digital phone to simply change the system setup. Likewise, using a phone to change the system setup is called MMC(Man Machine Communication) program. This guide describes how to program a digital phone.

## Document Content and Organization

This guide is composed of two Chapters and one Annex. Each chapter is introduced as follows:

### **CHAPTER 1. Overview Of MMC Programming**

This chapter describes things to know before starting MMC programming and about the buttons of digital phone and cautions.

### **CHAPTER 2. MMC Programming**

This chapter describes how to use each MMC program as it was listed.

### **ANNEX A. Abbreviation**

Acronyms frequently used in this document are described.

## Conventions

The following types of paragraphs contain special information that must be carefully read and thoroughly understood. Such information may or may not be enclosed in a rectangular box, separating it from the main text, but is always preceded by an icon and/or a bold title.

### **WARNING**

Provides information or instructions that the reader should follow in order to avoid personal injury or fatality.

### **CAUTION**

Provides information or instructions that the reader should follow in order to avoid a service failure or damage to the system.

### **CHECKPOINT**

Provides the operator with checkpoints for stable system operation.

### **NOTE**

Indicates additional information as a reference.

### **OPERATION PROCEDURES**

Indicates the operational procedures that should be executed in sequence.

## Reference

### OfficeServ 500 Installation Guide

Introduces the installation related information for OfficeServ 500 system.

### OfficeServ 500 Service Manual

Introduces circuit configuration of each section in OfficeServ 500 system, main functions, parts list, troubleshooting, and disassembly diagram of main device.

### DS-5012L Digital Phone User's Manual

This is a user's manual for the Large LCD Digital Phone(DS-5012L) that can be used by connecting to the OfficeServ 500 system.

### ITP-5012L IP Phone User's Manual

This is a user's manual for the Large LCD IP Phone that can be used by connecting to the OfficeServ 500 system.

### DS-5038D/5021D/5014D Digital Phone User Guide

This is a user's manual for the 2 Line LCD Digital Phone(DS-5038D, DS-5012D, DS-5014D) that can be used by connecting to the OfficeServ 500 system.

### ITP-5021D/5014D IP Phone User Guide

This is a user's manual for the 2 Line LCD IP Phone(ITP-5021D, ITP-5014D) that can be used by connecting to the OfficeServ 500 system.

### OfficeServ 500 Wireless LAN Service Manual

Introduces information needed to install the wireless device of the OfficeServ 500 system or for its maintenance.

### WIP-5000M Phone User Guide

This is a user's manual for WIP-5000M that is designed to use wireless LAN provided from the OfficeServ 500 system.

## Revision History

EDITION	DATE OF ISSUE	REMARKS
00	06. 2004.	First Edition
01	01. 2005.	<ul style="list-style-type: none"> <li>- MMC 324 added (SLI2 card interface)</li> <li>- New options added to MMC 110, 210, 861</li> <li>- Changed MMC descriptions relating to addition of WLAN functions and modification of options</li> </ul>

**This page is intentionally left blank.**

# SAFETY CONCERNS

For product safety and correct operation, the following information must be given to the operator/user and shall be read before the installation and operation.

## Symbols

**Caution**

Indication of a general caution

**Restriction**

Indication for prohibiting an action for a product

**Instruction**

Indication for commanding a specifically required action

## CAUTION

### **When using the auto record feature**

Before using the auto record feature make sure that you are not violating any state or federal laws. Some states require that the recorded party be notified. SAMSUNG is not responsible for any illegal use of this feature.

### **Call Cost**

Changing this value when there is a call in progress may result in an inaccurate call cost. This Meter Pulse Detection(MPD) facility requires the MPD version of the trunk card.

### **When changing the MMC [807], [809], [812] and [816]**

MMC [807], [809], [812] and [816] should not be changed from the default levels without the assistance of the local SAMSUNG distributor.

### **The DECT System Code/Register handsets Change**

Only the system administrator and/or installer should be allowed access to change the DECT System Code and Register handsets.

### **Compliance with the National Version Standard**

For the national version, OfficeServ 500 is designed to comply with the standard of the corresponding country. Therefore, in case the 'Program 812 Program the national standard change' needs to be used, please call the service company assigned by Samsung to get an expert's advice.

# CHAPTER 1. Overview Of MMC Programming

---

In this chapter, the things to know before you start MMC programming, and the phone buttons and cautions will be discussed.

## 1.1 Introduction to Programming

The MMC program means the changes on the data that is used for the system operation program. There are 3 levels of MMC programming, such as technician, operator, and station levels. According to the programming level, the station can program or cannot program the data change. The technician level programming and the operator level programming require a passcode for each level while the station level programming does not require a passcode.

NOTE

### Program List by User's Level

For information about the programming level classified by user's level, refer to '1.4 Program List by User's Level' of this chapter.

## 1.2 Phone Buttons

There are several phones that are allowed for MMC programming;

- DS-4000 series phones: DS-4028E, DS-4018E, DS-4008E
- DS-5000D series phone: DS-5038D, DS-5021D, DS-5014D
- ITP-5000D series phone: ITP-5021D, ITP-5014D

### 1.2.1 DS-4000 Series phones

The following figure shows the shape of DS-4028E phone among DS-4000 series phones.

Figure 1.1 DS-4028E phone

Among 3 Soft buttons, the first one is called the 'Left Soft button', which is used to save the modified data or to move the cursor inside the LCD display in the left direction.

Among 3 Soft buttons, the third one is called the 'Right Soft button', which is used to save the modified data or to move the cursor in the right direction.

Among 8 programmable buttons, the first 6 programmable buttons are assigned as 'A~F' to carry out specific functions or usage while programming. Generally, these buttons perform specific functions that you set for each corresponding button.

When MMC programming, other functions programmed on the programmable buttons are as follows:

- Volume buttons: Search the selected items.
- Dial keypad: Confirm the status

- Soft buttons: Move the cursor
- Speaker Button: Save data and proceed to the next program
- Hold Button: Erase the previously entered item
- A button: Select either a capital letter or small letter
- B button: Select either a Korean character or English character
- Transfer Button: Enter the programming code

## 1.2.2 DS/ITP-5000D Series Phones

There are several DS/ITP-5000D series phones, such as DS-5038D, DS-5021D, DS-5014D, ITP-5021D, ITP-5014D as shown in the figures below:

Figure 1.2 DS-5038D phone

Figure 1.3 DS-5021D/ITP-5021D phone

Figure 1.4 DS-5014D/ITP-5014D phone

The DS-5000D series phones have 38/21/14 programmable buttons that a station can register any functions he/she wants to use. Also, there are several other function buttons: the dial buttons, the volume button for controlling a voice volume, the redial button that allows to redial the latest phone number, the conference button that can be used during the conference, the transfer button that is used to transfer a call received during a phone conversation to another station, the hold button to hold a call for a while, the speaker button, and the navigation buttons that are designed for the convenience of phone users.

And, there is the LCD display that displays the station status and various other kinds of information. With three colors like red, green, and yellow, the station status indicator displays the current status of station.

## 1.3 Cautions in Programming

- Programming can be done while the handset is placed on the phone at a idle state.
- Programming can be done on any phone.
- Programming can be done only on the phone, not on normal phone.
- If the phone does not have the LCD display, press the numbers using the dial buttons as instructed by the programming guide, without using the volume buttons. However, if the phone does not have Soft buttons, certain programming cannot be done. Therefore, only the station level programming is allowed on the phone that does not have the LCD display.
- If the LCD displays an 'INVALID DATA' message while programming, this means that the entered data is invalid. Enter the correct data again.
- The content of the displayed message for each step shows the status after each step is executed.
- If no key is pressed for a certain period of time during programming(Key program end time, default is 60 seconds), it becomes a idle state from programming mode.
- If the phone is off hook while programming, it becomes a dial state from programming mode.
- Before the modified data is confirmed by pressing [Left Soft] button or [Right Soft] button, the [Speaker] or [Transfer] button is pressed to make it at a idle state or the phone is unplugged. In this case, the data entered up to that time will be automatically saved as the data displayed on the LCD.

## 1.4 Program List by User's Level

The MMC program can be divided into programmable one and non-programmable one. The programmable MMC is classified into 3 levels, such as technician, operator, and station level. In this section, the programmable MMC for each level will be introduced.

### 1.4.1 Station Level Programming

Programming can be done for only station level programs.

MMC Program No.	Program Description
MMC: 100	STATION LOCK
MMC: 101	CHANGE USER PASSCODE
MMC: 102	CALL FORWARD
MMC: 103	SET ANSWER MODE
MMC: 104	STATION NAME
MMC: 105	STATION SPEED DIAL
MMC: 106	STATION SPEED DIAL NAME
MMC: 107	KEY EXTENDER
MMC: 108	STATION STATUS
MMC: 109	DATE DISPLAY
MMC: 110	STATION ON/OFF
MMC: 111	PHONE RING TONE
MMC: 112	ALARM REMINDER CLOCK
MMC: 113	VIEW MEMO NUMBER
MMC: 114	PHONE VOLUME
MMC: 115	SET PROGRAMMED MESSAGE
MMC: 116	ALARM AND MESSAGE
MMC: 117	EDIT TEXT MESSAGE
MMC: 118	CONFERENCE GROUP
MMC: 119	CALLER ID DISPLAY
MMC: 120	LARGE LCD OPTION
MMC: 121	PHONE LANGUAGE
MMC: 122	NEWS DISPLAY SPEED
MMC: 125	EXECUTIVE STATE

## 1.4.2 Operator Level Programming

An technician can do programming within the range set by the MMC [802] CUSTOMER ACCESS MMC NUMBER.

Programming is allowed for any phone within the tenant group, but it can be done for only one phone at a time.

### 1.4.2.1 System Related MMC

The MMC programs related to the function of the system are as follows:

MMC Program No.	Program Description
MMC: 200	OPEN CUSTOMER PROGRAMMING
MMC: 201	CHANGE CUSTOMER PASSCODE
MMC: 202	CHANGE FEATURE PASSCODE
MMC: 203	ASSIGN UA DEVICE
MMC: 204	COMMON BELL CONTROL
MMC: 205	ASSIGN LOUD BELL
MMC: 206	BARGE-IN TYPE
MMC: 207	ASSIGN VM/AA PORT
MMC: 208	ASSIGN RING TYPE
MMC: 209	ASSIGN ADD-ON MODULE
MMC: 210	CUSTOMER ON/OFF PER TENANT
MMC: 211	DOOR RING ASSIGNMENT
MMC: 214	DISA ALARM RINGING STATION
MMC: 215	VOICE DIALLER OPTIONS
MMC: 216	VOICE DIALLER ASSIGNMENTS
MMC: 217	ISDN SERVICE TYPE
MMC: 220	STATION PAIR
MMC: 221	TRAFFIC REPORT OPTION
MMC: 222	EXTENSION TYPE
MMC: 223	FAX PAIR
MMC: 224	WAKE-UP ANNOUNCEMENT

### 1.4.2.2 Station Related MMC

The MMC programs related to the function of the station are as follows:

MMC Program No.	Program Description
MMC: 300	CUSTOMER ON/OFF PER STATION
MMC: 301	ASSIGN STATION COS
MMC: 302	PICKUP GROUPS
MMC: 303	ASSIGN BOSS/SECRETARY
MMC: 304	ASSIGN EXTENSION/TRUNK USE
MMC: 305	ASSIGN FORCED CODE
MMC: 306	HOT LINE/OFF HOOK SELECTION
MMC: 308	ASSIGN BACKGROUND MUSIC SOURCE
MMC: 309	ASSIGN STATION MOH SOURCE
MMC: 310	LCR CLASS OF SERVICE
MMC: 312	ALLOW CALLER ID
MMC: 313	COPY STN/TRK USE
MMC: 314	CONFIRM OUTGOING CALL
MMC: 315	BRANCH GROUP
MMC: 316	DISTINCTIVE RINGING
MMC: 317	ASSIGN STATION/STATION USE
MMC: 318	ASSIGN TRUNK/TRUNK USE
MMC: 319	CUSTOMER SET RELOCATION
MMC: 320	PRESET FWD NO ANSWER
MMC: 323	CALLING PARTY NUMBER
MMC: 324	SLI2 GAIN CONTROL

### 1.4.2.3 Trunk Related MMC

The MMC programs related to the function of the trunk are as follows:

MMC Program No.	Program Description
MMC: 400	CUSTOMER ON/OFF PER TRUNK
MMC: 401	TRUNK LINE/PBX LINE
MMC: 402	TRUNK DIAL TYPE
MMC: 403	TRUNK TOLL CLASS
MMC: 404	TRUNK NAME
MMC: 405	TRUNK CO TEL NUMBER
MMC: 406	TRUNK RING ASSIGNMENT
MMC: 407	FORCED TRUNK RELEASE
MMC: 408	ASSIGN TRUNK MOH SOURCE
MMC: 409	TRUNK STATUS READ
MMC: 410	ASSIGN DISA TRUNK
MMC: 411	ASSIGN E1 SIGNAL TYPE
MMC: 412	ASSIGN TRUNK SIGNAL
MMC: 413	VMS CALL TYPE
MMC: 414	ASSIGN CALLER ID TRUNKS
MMC: 415	REPORT TRUNK ABANDON DATA
MMC: 416	ASSIGN E & M/DID RINGDOWN
MMC: 418	R2MFC SIGNALING
MMC: 419	TRUNK NIGHT GROUP
MMC: 420	PRS SIGNAL
MMC: 421	TRUNK GAIN CONTROL
MMC: 422	TRUNK TMC GAIN
MMC: 423	S/T MODE
MMC: 424	BRI S0 MAPPING
MMC: 425	BRI AND PRI CARD RESTART
MMC: 426	E1/PRI CRC4 OPTION
MMC: 427	PRI OPTIONS
MMC: 428	BRI OPTIONS
MMC: 429	MSN DIGIT
MMC: 430	TRUNK COS
MMC: 433	COST RATE
MMC: 434	CONNECTION STATUS
MMC: 436	INSERT DIGIT

### 1.4.2.4 Timer and Tone Related MMC

The MMC programs related to the function of the timer and tone are as follows:

MMC Program No.	Program Description
MMC: 500	SYSTEM-WIDE COUNTERS
MMC: 501	SYSTEM TIMERS
MMC: 502	STATION-WIDE TIMERS
MMC: 503	TRUNK-WIDE TIMER
MMC: 504	PULSE MAKE/BREAK RATIO
MMC: 505	ASSIGN DATE AND TIME
MMC: 506	TONE CADENCE
MMC: 507	ASSIGN RING PLAN TIME
MMC: 508	CALL COST
MMC: 509	HOLIDAY ASSIGNMENT
MMC: 510	SLI RING CADENCE
MMC: 511	MSG WAITING LAMP CADENCE
MMC: 513	HOTEL TIMER
MMC: 514	TONE SOURCE
MMC: 515	ASSIGN DAYLIGHT SAVING DATE

### 1.4.2.5 Group Related MMC

The MMC programs related to the function of a group are as follows:

MMC Program No.	Program Description
MMC: 600	ASSIGN OPERATOR GROUP
MMC: 601	ASSIGN STATION GROUP
MMC: 602	STATION GROUP NAME
MMC: 603	ASSIGN TRUNK GROUP
MMC: 604	ASSIGN STATION TO PAGE ZONE
MMC: 605	ASSIGN EXTERNAL PAGE ZONE
MMC: 606	ASSIGN SPEED BLOCK
MMC: 607	UCD OPTIONS
MMC: 608	ASSIGN REVIEW BLOCK
MMC: 609	CALL LOG BLOCK
MMC: 610	R2MFC CALL TYPE
MMC: 611	ALLOW TEXT MESSAGING
MMC: 612	ALLOW GROUP CONFERENCE
MMC: 614	STATION/TRUNK USE GROUP

(Continued)

MMC Program No.	Program Description
MMC: 615	MGI GROUP
MMC: 616	MGI USER

#### 1.4.2.6 Tables, Codes, AA, DECT and VM MMC

The MMC programs related to the function of the tables, codes, AA, DECT and VM are as follows:

MMC Program No.	Program Description
MMC: 700	COPY COS CONTENTS
MMC: 701	ASSIGN COS CONTENTS
MMC: 702	TOLL DENY TABLE
MMC: 703	TOLL ALLOWANCE TABLE
MMC: 704	ASSIGN WILD CHARACTER
MMC: 705	ASSIGN SYSTEM SPEED DIAL
MMC: 706	SYSTEM SPEED DIAL BY NAME
MMC: 707	AUTHORIZATION CODE
MMC: 708	ACCOUNT CODE
MMC: 709	TOLL PASS CODE/SPECIAL CODE TABLE
MMC: 710	LCR DIGIT TABLE
MMC: 711	LCR TIME TABLE
MMC: 712	LCR ROUTE TABLE
MMC: 713	LCR MODIFY DIGIT TABLE
MMC: 714	DID NUMBER AND NAME TRANSLATION
MMC: 715	PROGRAMMED STATION MESSAGE
MMC: 717	UCD AGENT ID
MMC: 718	MY AREA CODE
MMC: 719	IDLE DISPLAY
MMC: 720	COPY KEY PROGRAMMING
MMC: 721	SAVE STATION KEY PROGRAMMING
MMC: 722	STATION KEY PROGRAMMING
MMC: 723	SYSTEM KEY PROGRAMMING
MMC: 724	DIAL NUMBERING PLAN
MMC: 725	SMDR OPTIONS
MMC: 726	VM/AA OPTIONS
MMC: 728	CID TRANSLATION TABLE
MMC: 730	AA RECORD GAIN

(Continued)

MMC Program No.	Program Description
MMC: 731	AA RAM CLEAR
MMC: 732	AA TRANSLATION TABLE
MMC: 733	AA PLAN TABLE
MMC: 735	AA USE TABLE
MMC: 736	AUTO ATTENDANT MESSAGE MATCH
MMC: 739	ASSIGN AA MOH
MMC: 740	DECT SYSTEM CODE
MMC: 741	DECT CLEAR REGISTRATION
MMC: 743	DBS RESTART
MMC: 744	BSI STATUS
MMC: 745	DBS STATUS
MMC: 746	DECT REGISTRATION ON/OFF
MMC: 747	BSI RF CARRIER
MMC: 748	COSTING DIAL PLAN
MMC: 749	RATE CALCULATION TABLE
MMC: 750	VM CARD RESTART
MMC: 751	ASSIGN MAILBOX
MMC: 752	AUTO RECORD
MMC: 753	WARNING DESTINATION
MMC: 754	VM HALT
MMC: 755	VM ALARM
MMC: 756	ASSIGN VM MOH
MMC: 757	VM IN/OUT
MMC: 758	VM DAY/NIGHT
MMC: 759	RING ASSIGNMENT BY CALLING PARTY NUMBER
MMC: 760	ITEM COST TABLE
MMC: 761	TAX RATE SETUP
MMC: 762	ROOM COST RATE

### 1.4.3 Technician Level Programming

This level is allowed to program every level of program.

This level of programming can be done on every phone within the system, but it can be done for only one phone at a time.

MMC Program No.	Program Description
MMC: 800	ENABLE TECHNICIAN PROGRAM
MMC: 801	CHANGE TECHNICIAN PASSCODE
MMC: 802	CUSTOMER ACCESS MMC NUMBER
MMC: 803	ASSIGN TENANT GROUP
MMC: 804	SYSTEM I/O PARAMETER
MMC: 805	SYSTEM VERSION DISPLAY
MMC: 806	CARD PRE-INSTALL
MMC: 807	PHONE VOLUME CONTROL
MMC: 809	LEVEL AND GAIN
MMC: 810	HALT PROCESSING
MMC: 811	RESET SYSTEM
MMC: 812	SET COUNTRY CODE
MMC: 813	HOTEL OPERATION
MMC: 814	SYSTEM MMC LANGUAGE
MMC: 815	CUSTOMER DATABASE COPY
MMC: 816	CONFERENCE GAIN
MMC: 818	PROGRAM DOWNLOAD
MMC: 819	SMART MEDIA FILE CONTROL
MMC: 820	ASSIGN SYSTEM LINK ID
MMC: 821	ASSIGN NETWORK TRUNK
MMC: 822	SET VIRTUAL EXTENSION TYPE
MMC: 823	ASSIGN NETWORK COS
MMC: 824	NETWORK DIAL TRANSLATION
MMC: 825	ASSIGN NETWORKING OPTION
MMC: 826	ASSIGN SYSTEM REFERENCE CLOCK
MMC: 829	LAN PRINTER PARAMETER
MMC: 830	ETHERNET PARAMETERS
MMC: 831	MGI PARAMETERS
MMC: 832	VOIP ACCESS CODE
MMC: 833	VoIP IP TABLE
MMC: 834	H.323 OPTIONS

(Continued)

MMC Program No.	Program Description
MMC: 835	MGI DSP OPTIONS
MMC: 836	H.323 GK OPTIONS
MMC: 837	SIP OPTIONS
MMC: 838	PRIVATE IP ADDRESSES
MMC: 840	IP PHONE INFORMATION
MMC: 841	SYSTEM IP OPTIONS
MMC: 844	IP STATION TYPE
MMC: 845	WLAN PARAMETER
MMC: 846	WIP INFORMATION
MMC: 847	WLAN RESET AND STATUS CHECK
MMC: 848	WLAN IP/MAC LIST
MMC: 849	WLAN CONFIGURATION
MMC: 850	SYSTEM RESOURCE DISPLAY
MMC: 851	ALARM REPORTING
MMC: 852	SYSTEM ALARM ASSIGNMENTS
MMC: 853	MAINTENANCE BUSY
MMC: 854	DIAGNOSTIC TIME
MMC: 855	SYSTEM OPTIONS
MMC: 856	TECH PROGRAMMING LOGS
MMC: 858	ASSIGN SYSTEM EMERGENCY ALARM
MMC: 859	HARDWARE VERSION DISPLAY
MMC: 860	UCD STATUS SERVICE
MMC: 861	SYSTEM OPTIONS
MMC: 890	INITIALIZE PORT

## 1.5 Program List by Name

This program list is arranged alphabetically.

Program Description	MMC Program No.
AA PLAN TABLE	MMC: 733
AA RAM CLEAR	MMC: 731
AA RECORD GAIN	MMC: 730
AA TRANSLATION TABLE	MMC: 732
AA USE TABLE	MMC: 735
ACCOUNT CODE	MMC: 708

## 1.6 Program List by Function

This section describes MMC programs are classified by the function of the OfficeServ 500.

### 1.6.1 Phone Function

The MMC programs related to the function of a phone that is connected with the OfficeServ 500 are as follows:

MMC Program No.	Program Description
MMC: 100	STATION LOCK
MMC: 101	CHANGE USER PASSCODE
MMC: 102	CALL FORWARD
MMC: 103	SET ANSWER MODE
MMC: 104	STATION NAME
MMC: 105	STATION SPEED DIAL
MMC: 106	STATION SPEED DIAL NAME
MMC: 107	KEY EXTENDER
MMC: 108	STATION STATUS
MMC: 109	DATE DISPLAY
MMC: 110	STATION ON/OFF
MMC: 111	PHONE RING TONE
MMC: 112	ALARM REMINDER CLOCK
MMC: 114	PHONE VOLUME
MMC: 115	SET PROGRAMMED MESSAGE
MMC: 116	ALARM AND MESSAGE
MMC: 119	CALLER ID DISPLAY

## 1.6.2 Networking Function

The MMC programs related to the function of networking are as follows:

MMC Program No.	Program Description
MMC: 820	ASSIGN SYSTEM LINK ID
MMC: 821	ASSIGN NETWORK TRUNK
MMC: 822	SET VIRTUAL EXTENSION TYPE
MMC: 823	ASSIGN NETWORK COS
MMC: 824	NETWORK DIAL TRANSLATION
MMC: 825	ASSIGN NETWORKING OPTION
MMC: 829	LAN PRINTER PARAMETER
MMC: 830	ETHERNET PARAMETERS
MMC: 837	SIP OPTIONS
MMC: 840	IP PHONE INFORMATIONES
MMC: 841	SYSTEM IP OPTIONS
MMC: 844	IP STATION TYPE
MMC: 844	IP STATION TYPE

## 1.6.3 VoIP Function

The MMC programs related to the function of VoIP(Voice over Internet Protocol) are as follows:

MMC Program No.	Program Description
MMC: 831	MGI PARAMETERS
MMC: 832	VOIP ACCESS CODE
MMC: 833	VoIP IP TABLE
MMC: 834	H.323 OPTIONS
MMC: 835	MGI DSP OPTIONS
MMC: 836	H.323 GK OPTIONS
MMC: 836	H.323 GK OPTIONS

## 1.6.4 WLAN Function

The MMC programs related to the function of WLAN(Wireless Local Area Network) are as follows: (For systems whose MCP2 version is earlier than V2.40, the MMCs in the table below are displayed only when the ‘USE WLAN FEATURE’ is set to ENABLE at [MMC 861 USE WLAN FEATURE]. For systems whose MCP2 version is V2.40 or later, the MMC items in the table below are all displayed and the ‘USE WLAN FEATURE’ item is not included in [MMC 861 USE WLAN FEATURE].)

MMC Program No.	Program Description
MMC: 845	WLAN PARAMETER
MMC: 846	WIP INFORMATION
MMC: 847	WLAN RESET AND STATUS CHECK
MMC: 848	WLAN IP/MAC LIST
MMC: 849	WLAN CONFIGURATION

## 1.6.5 LCR Function

The MMC programs related to the function of LCR(Least Cost Routing) are as follows:

MMC Program No.	Program Description
MMC: 710	LCR DIGIT TABLE
MMC: 711	LCR TIME TABLE
MMC: 712	LCR ROUTE TABLE
MMC: 713	LCR MODIFY DIGIT TABLE

## 1.6.6 Auto Attendant/Voice Mail Function

The MMC programs related to the function of AA(Auto Attendant) or VM(Voice Mail) are as follows:

MMC Program No.	Program Description
MMC: 207	ASSIGN VM/AA PORT
MMC: 215	VOICE DIALLER OPTIONS
MMC: 216	VOICE DIALLER ASSIGNMENTS
MMC: 413	VMS CALL TYPE
MMC: 726	VM/AA OPTIONS
MMC: 730	AA RECORD GAIN
MMC: 731	AA RAM CLEAR
MMC: 732	AA TRANSLATION TABLE
MMC: 733	AA PLAN TABLE
MMC: 735	AA USE TABLE
MMC: 736	AUTO ATTENDANT MESSAGE MATCH
MMC: 739	ASSIGN AA MOH
MMC: 750	VM CARD RESTART
MMC: 751	ASSIGN MAILBOX
MMC: 752	AUTO RECORD
MMC: 753	WARNING DESTINATION
MMC: 754	VM HALT
MMC: 755	VM ALARM
MMC: 756	ASSIGN VM MOH
MMC: 757	VM IN/OUT
MMC: 758	VM DAY/NIGHT

## 1.6.7 Diagnosis Function

The MMC programs related to the function of diagnosing the system are as follows:

MMC Program No.	Program Description
MMC: 434	CONNECTION STATUS
MMC: 851	ALARM REPORTING
MMC: 852	SYSTEM ALARM ASSIGNMENTS
MMC: 853	MAINTENANCE BUSY
MMC: 854	DIAGNOSTIC TIME
MMC: 855	SYSTEM OPTIONS
MMC: 890	INITIALIZE PORT

## 1.6.8 Hotel Function

The MMC programs related to the function of a hotel are as follows:

MMC Program No.	Program Description
MMC: 221	TRAFFIC REPORT OPTION
MMC: 222	EXTENSION TYPE
MMC: 433	COST RATE
MMC: 513	HOTEL TIMER
MMC: 748	COSTING DIAL PLAN
MMC: 749	RATE CALCULATION TABLE
MMC: 760	ITEM COST TABLE
MMC: 761	TAX RATE SETUP
MMC: 762	ROOM COST RATE

## CHAPTER 2. MMC Programming

This chapter describes how to use each MMC program as it was listed.

### 2.1 Overview of Programming Procedure

Here, the order of programming will be discussed before explaining programming method of each list. Please read the description carefully before programming.

The programming order is as follows:

- 1) Make the programmable state.
  - Press the Transfer button at pause.
  - Enter the program number, either 200 or 800.
  - Enter either the operator passcode or the technician passcode.
  - Press 1 dial button to 'enable' the programming mode.
  - In case of Program 800 Technician Program Mode Setting, enter the tenant number to be programmed.
  
- 2) Make the program number selectable state.

If the Speaker button is pressed, the program selection mode appears.

Or, if the Transfer button is pressed, the programming state ends and the pause state begin.
  
- 3) Select a program.

Enter the program number.

Or, select the program number with the Volume button and press the Speaker button.

Or, Press Transfer button in a pause state and enter the program number.
  
- 4) Start programming the corresponding program.

## 2.2 Programming Procedure

This section describes a procedure of each program. Refer to the programming procedure corresponding to the MMC.

### [100] STATION LOCK

Allows the system administrator or technician to lock or unlock an individual station or all stations simultaneously. The three options are as follows:

No	Type	Description
0	UNLOCKED	Unlocks a locked station.
1	LOCKED OUT	The phone cannot make calls outside the system. It can however make and receive intercom calls and receive incoming Trunk Line calls. When in this mode the Hold button of the phone will flash slow RED.
2	LOCKED ALL	The phone cannot make or receive any calls. When in this mode the Hold button of the phone will light steady RED.

### CONDITIONS

- Check if the station lock function is disabled at 'MMC 301 ASSIGN STATION COS'. If so, the station cannot be locked, but a locked station can be unlocked.
- A station can be locked or unlocked under any condition when the station is in Operator Level Programming or Technician Level Programming.

### DEFAULT DATA

ALL STATIONS UNLOCKED

### ACTION

- 1) Press Transfer button and enter 100.  
Display shows:
- 2) Dial station number.(e.g., 205)  
OR  
Press Volume button to select station and press Right Soft button to move cursor.  
OR  
Press ANS/RLS button to select all stations.
- 3) Enter 0 to unlock or 1 to lock.(e.g., 1)  
OR  
Press Volume button to make selection and press Right Soft button to return to step 2.

### DISPLAY

- 4) Press Transfer button and enter to save and exit.  
OR  
Press Speaker button to save and advance to next MMC.

**RELATED ITEMS**

MMC 101	CHANGE USER PASSCODE
MMC 301	ASSIGN STATION COS
MMC 701	ASSIGN COS CONTENTS

## [101] CHANGE USER PASSCODE

Allows the system administrator or technician to reset any phone's passcode to its default value of '1234'. This MMC cannot display station passcodes; it can only reset them to default.

Phone users can set or change their individual passcodes. The passcode is used to lock or unlock the phone for toll restriction(call barring) override and to access the DISA feature.

### CONDITIONS

- The passcode of a station performing Operator Level Programming or Technician Level Programming cannot be changed while the program mode is 'ENABLE'.
- An Operator or Technician Level can only delete the passcode of a station and reset the passcode to the default value, '1234', not permitting to know the passcode.

NOTE

#### Default passcodes

Default passcodes cannot be used for toll restriction override or for DISA access.

### DEFAULT DATA

ALL STATION PASSCODES: 1234

### ACTION

- 1) Press Transfer button and enter 101.  
Display shows:
- 2) Dial phone number.(e.g., 205)  
OR  
Use Volume button to scroll through phone numbers and press Right Soft button to move the cursor right.
- 3) Press Hold button to reset passcode.
- 4) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

```

### RELATED ITEMS

MMC 100            STATION LOCK

## [102] CALL FORWARD

Allows the system administrator to program the call forward destinations for other station users. This MMC also allows call forward to be set after the destination has been entered.

Allows several types of call forwarding: FORWARD ALL, FORWARD NO ANSWER, FORWARD BUSY and FORWARD DND. There is an additional option, FORWARD BUSY/NO ANSWER, that allows both of these options to be activated at the same time, provided that destinations have been entered for both.

No	Type
0	FORWARD CANCEL
1	FORWARD ALL CALL
2	FORWARD BUSY
3	FORWARD NO ANSWER
4	FORWARD BUSY/NO ANSWER
5	FORWARD DND

### CONDITIONS

- When 'FORWARD BUSY/NO ANSWER' is selected, calls are forwarded to stations set at 'FORWARD BUSY' and 'FORWARD NO ANSWER'. Thus, the destination number must be set for both 'FORWARD BUSY' and 'FORWARD NO ANSWER' to select 'FORWARD BUSY/NO ANSWER'.
- If the 'FORWARD' is set to 'OFF' at 'MMC 701 ASSIGN COS CONTENTS', call forward cannot be set but can be canceled.(Default: 'OFF')
- The 'FORWARD' and 'EXT FWD' must both be set to 'ON' at 'MMC 701 ASSIGN COS CONTENTS' in order to forward a call to an external number. If only the 'FORWARD' is set to 'ON', calls can only be forwarded to internal numbers.(Default: 'OFF')

### DEFAULT DATA

## [103] SET ANSWER MODE

Allows the system administrator to change the answer mode of any phone.

Each phone can have its answer mode set to one of the following options:

No	Type	Description
0	RING MODE	The phone will ring in one of eight custom ring patterns. Calls are answered by pressing the ANS/RLS Button or by lifting the handset.
1	AUTO ANSWER MODE	After giving a short attention tone, the phone will automatically answer calls on the speakerphone. When a Trunk line is transferred to a phone in Auto Answer, the screened portion of the call will be Auto Answer, but the phone will ring when the transfer is complete if you have not pressed the ANS/RLS Button or lifted the handset.
2	VOICE ANNOUNCE	The phone will not ring. After a short attention tone, callers can make an announcement but the ANS/RLS Button or handset must be used to answer calls.

### CONDITIONS

Since the DS-12B digital phone is not equipped with a microphone, the phone operates in voice announcement mode when a call arrives while set to auto answer mode. Users must use the handset to reply to the caller.

### DEFAULT DATA

ALL PHONES: RING

### ACTION

- 1) Press Transfer button and enter 103.  
Display shows:
- 2) Dial phone number.(e.g., 205)  
OR  
Press Volume button to select phone and press Right Soft button to move cursor.  
OR  
Press ANS/RLS button to select all.
- 3) Dial 0, 1 or 2 to change ring mode.  
OR  
Press Volume button to select ring mode and press Right Soft button to return to step 2 above.

MMC 111            PHONE RING TONE

## [104] STATION NAME

Allows the system administrator or technician to enter an 11-character name to identify an individual station.

### CONDITIONS

NONE

### INPUT CHARACTERS

Names are written using the keypad. Each key press selects a character. Pressing the dial pad key moves the cursor to the next position. For example, if the directory name is 'SAM SMITH,' press the number '7' four times to get the letter 'S'. Now press the number '2' once to get the letter 'A'. Continue selecting characters from the table below to complete your message. Pressing '**A**' button will change the letter from upper case to lower case.

NOTE

#### Volume Up/Down keys

When the character you want appears on the same dial pad key as the previous character, press the Volume Up button to move the cursor to the right or the Volume Down button to move the cursor to the left. A space can be entered by using these keys.

COUNT	1	2	3	4	5
DIAL 0	<	>	.	)	0
DIAL 1	Space	?	,	!	1
DIAL 2	A	B	C	@	2
DIAL 3	D	E	F	#	3
DIAL 4	G	H	I	\$	4
DIAL 5	J	K	L	%	5
DIAL 6	M	N	O	^	6
DIAL 7	P	Q	R	S	7
DIAL 8	T	U	V	*	8
DIAL 9	W	X	Y	Z	9
DIAL *	:	=	[	]	*

The # button can be used for the following special characters:

#, space, &, !, :, ?, ., ,, %, \$, -, <, >, /, =, [, ], @, ^, (, ), \_ , +, {, }, |, ;, ", →, ' . \.

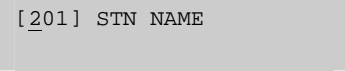

### DEFAULT DATA

## [105] STATION SPEED DIAL

Allows the system administrator or technician to program the personal speed dial locations assigned to a station. This must be done for single line telephones because these stations cannot access programming.

### CONDITIONS

Each station may have up to 50 locations or bins assigned to it in MMC 606 Assign Speed Block.

The speed dial bins are numbered 00~49. Each speed dial number consists of a trunk or trunk group access code followed by a separator and up to 24 digits to be dial. These dial digits may consist of 0~9, \* and #. If the system recognizes a valid trunk or trunk group access number, it will automatically insert the separator.

### DEFAULT DATA

NONE

### PROGRAM BUTTONS

- B Used to insert a flash code 'F'
- C Used to insert a pause code 'P'
- D Used to insert a pulse/tone conversion code 'C'
- E Used to mask/unmask following digits(shows as '[' or ']')
- F Used to enter name for speed dial bin(see MMC 106)

### ACTION

- 1) Press Transfer button and enter 105.  
Display shows:
- 2) Dial station number.(e.g., 205)  
OR  
Press Volume button to select station and press Right Soft button to move cursor.  
If selected station has no speed dial bins, the display will be as shown and a new station may be selected.

## [207] ASSIGN VM/AA PORT

Enables SLI ports to be designated as NORMAL or VMAA. VMAA ports receive digits designated in MMC 726 VM/AA Options and also receive a true disconnect signal upon completion of a call. Only SLI cards, not key daughter boards, support disconnect signal. Do not make VMAA ports data; this will return them to a single line port and stop voice mail integration. VMAA ports have the equivalent of data protect written in the program and are protected against tones.

NOTE

This MMC is not used to assign voice mail card ports. Voice mail card ports are assigned as voice mail ports automatically when the system detects a CADENCE or a SVMi-8/16 card.

### CONDITIONS

NONE

### DEFAULT DATA

NORMAL PORT

### ACTION

- 1) Press Transfer button and enter 207.  
Display shows:
- 2) Dial station number.(e.g., 205)  
OR  
Press Volume button to select station and press  
Right Soft button to move cursor.
- 3) Dial 1 or 0 to select port type.  
(1:VMAA, 0:NORMAL)  
Press Volume button to select option and press  
Right Soft button.
- 4) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

**[210] CUSTOMER ON/OFF PER TENANT**

Allows the system administrator to set in system features on a per-tenant basis. Each system option has a corresponding dialling number, as listed below. All options toggle ON/OFF.

No	Option	Default	Description
00	DISA PSWD	ON	When ON, a caller must enter extension number and DISA password when they call a DISA trunk. When OFF, extension number and DISA password are not required and the caller has full access to all features allowed on this trunk.
01	LCR ENABLE	OFF	This option determines whether the system will or will not route outgoing calls based on the information in the LCR routing tables.
03	PERI UCD RPT	OFF	Periodic UCD Information provider. Enables UCD Statistics data on a per UCD group basis to print out on the IO port which has been set as PERI UCD in real time(every 3~99 seconds). This allows the information to be interfaced and manipulated by an external package or third party provided software.
04	CID CODE INS	OFF	When ON, the system will insert the country code when receiving CID information. This feature can use the CID display call back feature.
05	DISA MOH	OFF	When ON, outside parties will hear trunk MOH instead of dial tone from the time the system answers a DISA trunk until the caller dials a digit.
06	TRANSFER MOH	OFF	When ON, outside parties will hear trunk MOH instead of ring back tone from the time a transfer is completed until the call is answered by an internal party.
08	DID BSY ROUT	OFF	When ON, a DID call directed to a busy station will re-route to the destination in MMC 406 for that trunk if CW is set to OFF in MMC 714. If the CW option is set to ON the call will camp on. When OFF and the CW option is set to OFF, the call will re-route to the operator.
09	ALARM MOH	ON	When ON, if station user answer alarm ring, will hear station MOH instead of dial tone.
12	CONF TONE	OFF	When ON, provides conference tone every conference tone time.(Available in Australia or Italy only)
13	RECALL PIKUP	ON	When ON, a call recalling to a station can be picked up using Direct Call Pickup, Pickup Group and My Group features. This applies to held calls recalling and transferred calls recalling to a station.

(Continued)

No	Option	Default	Description
14	ICM EXT FWD	OFF	When ON, call forward external is allowed when intercom calls are placed to a station that has Call Forward External programmed and set.
16	DID ERR TONE	OFF	This option was added to provide error tone when an invalid DID number is received.
18	KTS DISC ALM	OFF	When ON, generates system alarm when a phone disconnect or connect.
19	OFF HOOKALM	OFF	When ON, generates system alarm when a phone maintains off hook condition longer than timer.
20	SL SELF RING	OFF	When ON, generates ring during 10 seconds when a single line phone dials self number and hang up.
21	SGR INC BUSY	OFF	When ON, generates busy tone when all station group member busy for group call. This setting does not work for Station Groups which have Unconditional Ring Mode.
24	TRANSFER CANCEL	OFF	When OFF, a single line phone will be able to handle 2 calls simultaneously. Using the hook-flash to toggle between them. When ON, a single line telephone will be able to connect to the second call, but pressing the hook flash will not toggle between the two calls it will disconnect the second call and reconnect the single line telephone to the first call.
26	RECALL DISC	OFF	When ON, the system disconnects a call when transfer recall.
29	ARD TONE CHK	ON	When OFF, the system use time for checking destination is busy when auto retry.
30	VPN ENABLE	OFF	When ON, the Australia type VPN enabled.
31	IN TOLL CHK	OFF	When OFF, the system doesn't toll restrict when incoming call.
32	ISDN PROGCON	OFF	When ON, if an outgoing call receives PROGRESS message from ISDN trunk, the call will connect without CONNECT message.
33	INCLUDE VAT	OFF	When OFF, not printed VAT total line when Hotel Report.(Available in Hotel/Motel enabled only)
36	DSS KEY DPU	OFF	When ON, directed pick-up the call when press ringing DS key.
37	BEGN DGT DSP	OFF	When ON, an outside call is made via speed dial or LNR where more than 11 digits are dialed then the first dialed digits are shown on the phone display.
38	ONE TCH FACC	OFF	When OFF, the forced account mode user can not use one touch account code(ACC) key.

(Continued)

No	Option	Default	Description
39	SGR ALL OUT	OFF	When ON, the last of station group member can out of group.
40	CHAIN FWD	ON	When ON, a call is directed to a station that may be forwarded to another station that is call forwarded to a VMAA, then the caller will be directed to the last station's mailbox it reached. When OFF, the caller will be directed to the first station's mailbox instead of the last.
41	TRK MONITOR	OFF	When ON, can override to trunk and a call is connected override extension when a original caller hang on. When OFF, can override to extension only and a call is disconnected when a original caller hang on.
42	VOIP MFRALOC	OFF	When ON, a MFR assigned for VoIP tandem call when a call incoming from VoIP trunk to another trunk outgoing.
43	NTWK AUTOTMR	OFF	When OFF, a call duration timer disabled via networking intercom call.
45	NO STAFF COD	OFF	When ON, the steps verifying the staff code will be omitted in HOTEL operation.
46	PERI UCD SIO	OFF	When ON, the PERI UCD data will be sent to the SMDR IO port.
47	AUTO CLEANED	OFF	When the room is checked-out, the room status is changed to NEED CLEAN. When the option is set to ON, the room status will be changed to AVAILABLE.
48	REDIAL REVW	OFF	When ON, the CALL LOG review status will be appeared when LNR button is pressed.
51	ISDN KEYFAC	OFF	When ON, if phone user press '*' or '#' during conversation via BRI trunk, system send information message instead of digit message.
52	CHK SPV TRK	OFF	When ON, if both trunks don't have supervision feature then cannot make outgoing transfer or unsupervised conference.
53	PRE FWD BUSY	OFF	When ON, a call arrives busy station, that is not set forward busy, if preset no answer destination is available, a call re-route to that destination immediately.
54	ORG DIAL LOG	OFF	When ON, originally dialed digit will be saved as outgoing call log in Large LCD phone. When OFF, invalid dialling such as dialling of not exist station number will not be saved as outgoing call log in Large LCD phone.
55	TIE TRSF RCL	ON	When ON, the trunk call is transferred to the TIE line and is not answered within transfer recall time, the call is recalled to the original transferring station.

(Continued)

No	Option	Default	Description
56	VOIP REALRBT	OFF	When ON, the system will connect real path of outgoing trunk to the incoming VOIP Trunk user instead of providing the virtual ringback tone.
62	SMDR AUT2ACC	OFF	When ON, the AUTHORIZATION CODE will be printed in ACCOUNT field of SMDR.
64	IPNW REAL RB	OFF	Sets whether to play a virtual tone or the ring-back tone returned from the other party, for a VoIP networking call.
66	TRK AUTO MOH	OFF	If this option is set to ON and if a call arrives through a C.O. line whose AUTO ANSWER option is set to ON by MMC 400 (DID DESTINATION must also be set to A if the incoming call adheres to the DID reception table.), the call will be answered automatically after the DISA ANSWR TIME defined by MMC 400 elapses. The system plays the sound defined by MMC 408 to the caller and connects the call to the destination defined by MMC 406. If the call is not answered within the MMC 501 TRK AUTOMOH DISC TIME, the system disconnects the call automatically.
67	TRSF VT KEY	ON	If set to ON, pressing this key will be same as pressing the VT key when switching to Voice Mail.
68	PAIR NO RING	OFF	If set to OFF while a call is camping on an extension, the system services off-hook ring to the connected station and disables the idle paired extension from ringing.

## [221] TRAFFIC REPORT OPTION

This MMC is used to print a traffic report and select options. The traffic report can be printed upon demand, every hour, at a programmed time of each day, or up to three separate timed shifts. Automatic printing will always clear the totals.

When report **MANUAL PRINT OUT** is selected, the options are:

No	Option	Description
0	PRINT AND CLEAR	A report is printed and all totals are reset to 0.
1	PRINTOUT ONLY	A report is printed and all the totals are saved.
2	CANCEL PRINTOUT	The program return to previous menu if no report is ended.

When **AUTO PRINT OPTN** is selected, the options are:

No	Option	Description
0	AUTO PRINT OFF	Automatic print feature is disabled.
1	DAILY	A report is printed at a programmable time every day and all the totals are reset to '0'
2	EVERY HOUR	A Traffic report will be printed every hour
3	TIME SHIFT	Up to three separate Start and End times may be programmed to report traffic within certain times of a day. A report is printed at the end of each End time and all totals are reset to '0'

When a report is printed, the totals represent call statistics accumulated from the date of the last report stated as **BEGINNING: D & T** up to the date of this printout stated as **ENDING D & T**.

If there are no trunks in a group, the trunk group report for that group will not print.

## [222] EXTENSION TYPE

This MMC enables station ports to be defined for a specific use. Each telephone can be designated as being one of the five(5) following types. These types can be changed by dialling the type number or by scrolling through the types and pressing the Right Soft button to select the type desired.

No	Type	Description
0	NORMAL STATION	This is the default setting. The station will operate in the normal manner associated with this type of station. Ports designated as VMAA in MMC 207 must be designated as normal in this MMC.
1	GUEST SMOKING	When a station is designated as this type it will appear in room status and check in features as a smoking room.
2	GUEST NO SMOKING	When a station is designated as this type it will appear in room status and check in features as a non smoking room.
3	MEETING ROOM	Stations designated as Meeting room stations will have the same attributes as guest rooms with regard to cleaning and occupied status but will not show up while scrolling through room status lists.
4	ADMINISTRATOR	Only stations designated as administrator stations can use the hotel motel features such as check in etc.
5	FAX STATION	When a station is designated as this type it can be assigned to pair station of GUEST SMOKING ROOM or GUEST NO SMOKING ROOM in MMC 223.

### CONDITIONS

This function can be used only when the hotel function is enabled at 'MMC 813 HOTEL OPERATION'.

## [224] WAKE-UP ANNOUNCEMENT

This MMC is enhance Wake Up feature. The system will play a recorded message when a Wake Up call is answered by the user. The Wake Up Announcement feature will require an Automated Attendant(AA) card be installed in the system. When a Wake Up call is answered, the system will access the customized Wake Up message(1-48) that has been recorded in the AA card. The end user will record this message and have the ability to change it when desired Auto Attendant operation. The Wake Up message will have no default ROM message assigned to it. However a ROM message(49-64) may also be assigned as the Wake Up message if desired.

This MMC has three options.

No	Option	Description
0	AA GROUP	Determines which AA group will be connected when a Wake Up call is answered. This destination can be a any AA groups.
1	MESSAGE NO	Determines which message will be played when a Wake Up call is answered. This destination can be a custom recorded message (1-48) or one of the pre-programmed messages(49-64).
2	GROUP BUSY	Determines which tone source will be connected when a AA group members are all busy. This destination can be a NONE, TONE or extern music on hold. If NONE set then dial tone connected, if TONE set then hold tone connected.

## [308] ASSIGN BACKGROUND MUSIC SOURCE

Assigns a background music source to the phones. There are 6 possible music selections depending on the number of MISC(daughter) boards that are installed in the system.

### CONDITIONS

- You may also select an Auto Attendant(AA) port to provide continuous play of a specific recording. The AA port selected must be the last port on the card. If selected, the BGM source will be the message defined in MMC 739 from the port defined in this MMC.  
For example, if this MMC selects 201's music source as 3966(the last port on the second AA card) and MMC 739 selects Message 20 for the second AA card, when extension 201 is placed on hold, 201 will hear message 20 from the second installed AA card.
- If you have a SVMi Voice Mail System installed you may also select a SVMi recording as a music. The recording must already been defined in MMC 756 and will show up here as the SVMi port assigned with the recording.
- To use an external sound source, connect the corresponding port of the terminal box to the external sound source of the MISC card. If 'NONE' is set for background music or if a sound source is not connected to the external sound source port designated as the background music source, music will not be played even if the background music function is enabled.

## [316] DISTINCTIVE RINGING

Allows the technician to select the ring tone heard at a phone when called by a specific station or when a specific trunk rings that phone. There is also a cadence control option to perform a similar function for single line sets. There are eight ring tones available along with a Follow Station(NO) option for the phones. There are 5 cadences and a follow station option for SLT's.

It also allows the technician to assign the call priority for a group call when called by a specific station or when a specific trunk rings that phone. When calls into station group come and group members are all busy, the system will assign a priority to a specific station or a specific trunk so that calls from a high priority call will be placed at the front of the group queue. If this option sets NO, the longest call that placed at the group queue has the highest priority. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest.

Option	No	Description
TONE Option		Calls will ring with the phone users choice of ring frequency.
	1~8	Calls from the programmed station or trunk will ring phones with this ring frequency.
CADENCE Option		Calls will ring with the normal SLT ring cadences.
	1	Calls from the programmed station or trunk will ring SLT's with the intercom ring cadence.
	2	Calls from the programmed station or trunk will ring SLT's with the CO ring cadence.
	3	Calls from the programmed station or trunk will ring SLT's with the DOOR ring cadence.
	4	Calls from the programmed station or trunk will ring SLT's with the ALARM ring cadence.
	5	Calls from the programmed station or trunk will ring SLT's with the CALLBACK ring cadence.

### CONDITIONS

- Rings of digital phones are distinguished by their tone. If the T(TONE) of the originating internal/external station is set to 'NO', the bell rings according to the 'MMC 111 PHONE RING TONE' of the terminating station. If the T is set to 1-8, the bell rings according to the designated ring tone.
- Rings of common phones are distinguished by their ringing interval. If the C(CADENCE) of the originating internal/external station is set to 'NO', the bell rings according to the interval of 'MMC 510 SLI RING CADENCE' for each originating station type. If the C is set to 1-5, the bell rings according to the interval set at 'MMC 510 SLI RING CADENCE' regardless of the originating station type.

## [319] CUSTOMER SET RELOCATION

Customer Set Relocation allows System Administration level or Technician level access to relocate or exchange similar stations in the system without wiring changes(see Allow Table below). This program is a one for one exchange with like stations(e.g., Single line to single line, 6 button phone to 6 button phone etc.) All individual station assignments such as trunk ring, station group, station COS, station speed dial, button appearances, etc. will follow the Customer Set Relocation program. 12 button phones and 24 button phones can be exchanged. 48 button modules and 64 button modules can also be exchanged. Single line stations numbers can be exchanged. If incompatible set types are selected the system will provide an ERROR: NO MATCH message. If 48 or 64 button module units are to be exchanged the Master assignment must be removed prior to using Customer Set relocation. If the 48 or 64 button module Master station is not removed the error code ERROR: NOT ALONE will appear on the LCD display. A station must be in the idle state(on hook) to perform Customer Set Relocation. If a wired location has a station port connected but no telephone instrument the Customer Set Relocation program will allow set relocation as long as the station types are similar.

12 button and 24 button assignments should be taken in consideration when relocating these types of sets due to the button configurations of the instruments.

If a 12 button set and a 24 button set are exchanged using the Customer Set Relocation program the first twelve buttons on the 24 button set will have the button programming of the 12 button set. The 12 button set will then have the programming of the first twelve buttons of the 24 button set. In other words, when exchanging 12 and 24 button set only the first twelve buttons will swapped.

## [320] PRESET FWD NO ANSWER

Allows a technician to assign a default destination for FNA to each station on the system. These destinations may be different for each station or they may be the same. The preset FNA destination will be temporarily overwritten if the station user enters a different FNA destination. If you cancel the new destination, the preset destination will once more be in effect. Preset Forward No Answer time follows the station no answer forward timer.

Preset forward no answer can be assigned respectively for each type of call.

No	Type	Description
0	INT	Preset forward no answer applies only to intercom call.
1	EXT	Preset forward no answer applies only to incoming call.
2	BOTH	Preset forward no answer applies to both intercom and incoming call.

NOTE

### When setting PRE FWD BUSY in MMC 210

MMC 404            TRUNK NAME

## [406] TRUNK RING ASSIGNMENT

Enables ringing to a specific station or to a group of stations when incoming calls are received. This MMC controls ring plan destinations for ring down trunks. If the ring plan destinations are not input the default ring plan is ring plan 1. Station group 500 is default in Ring Plan 1.

### CONDITIONS

NONE

### DEFAULT DATA

ALL TRUNKS RING DEFAULT OPERATOR GROUP

### ACTION

- 1) Press Transfer button and enter 406.  
Display shows:
- 2) Dial trunk number.(e.g., 704)  
OR  
Use Volume button to scroll through trunk numbers and press Right Soft button to move the cursor.  
OR  
Press ANS/RLS button for all.
- 3) Dial ring plan number or press Right Soft button to move the next step.
- 4) Dial station number or station group number.  
(e.g., 205)  
OR  
Press Volume button to make selection and press Right Soft button to move cursor to the next ring plan destination and repeat step 5.  
OR  
Press Left Soft button to return to step 5.
- 5) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

## [408] ASSIGN TRUNK MOH SOURCE

Allows the system administrator to select which Music On Hold(MOH) source can be heard on each trunk. If the trunk AUTO ANSWER function is enabled, this program can be used for selecting the music source. The trunk AUTO ANSWER function can be enabled only when the TRK AUTO MOH option of [MMC 210] is set to ON and when the AUTO ANSWER option of [MMC 400] is set to ON. (If an incoming call adheres to the DID reception table, the DID DESTINATION must also be set to A.)

In this MMC, you can also assign the sound source when TRUNK AUTO ANSWER feature is activated.

For the five types of selections, see below :

Type	Description
TONE	An intermittent tone is played to the caller.
NONE	No Music on Hold selection.
37X	If X is zero(0), a chime tune is played. If X is another number, an external source from a MISC(daughter) board is played.
39XX(when AA is used)	The MOH source is provided by the AA card. See MMC 739.
SVMi PORT NUMBER	If you have a SVMi Voice Mail System installed you may also select a SVMi recording as a music source. The recording must already been defined in MMC 756 and will show up here as the SVMi port associated with the recording.

### CONDITIONS

To use an external sound source, connect the corresponding port of the terminal box to the external sound source of the MISC card.

### DEFAULT DATA

TONE

### ACTION

- 1) Press Transfer button and enter 408.  
Display shows: current setting.
- 2) Dial trunk number.(e.g., 704)  
OR  
Use Volume button to scroll through trunk numbers and press Right Soft button to move cursor.  
OR

## [410] ASSIGN DISA TRUNK

Allows the system the ability to have Direct Inward System Access(DISA). Because there is a possibility that unauthorized calls will be made via this feature, several safeguards have been added. The end user must be informed of these to prevent unnecessary service calls. DISA can lockout when a predetermined number of invalid consecutive calls are attempted. Callers will then receive error tone until the programmable timer has expired.

### CONDITIONS

- The \* key may be used to initiate new dial tone while in a station to station call.
- The # button may be used to terminate the DISA call and disconnect the central office line. DISA lines must be assigned to the Ring Plan(s).

### DEFAULT DATA

ALL TRUNKS: NORMAL

### ACTION

- 1) Press Transfer button and enter 410.  
Display shows:
- 2) Dial trunk number.(e.g., 704)  
OR  
Press Volume button to select trunk and press Right Soft button.

## [412] ASSIGN TRUNK SIGNAL

Allows for the assignment of analog DID or E & M cards for proper signaling. This MMC is only for analog types of DID/E & M trunks. These trunks can also use the translation tables in MMC 714. The signaling condition types are as follows:

No	Signaling condition type
0	IMMEDIATE START
1	DELAYED START
2	WINK START

### CONDITIONS

An analog E & M/DID Trunk card must be installed in the OfficeServ 500 system. Otherwise, the 'NO E & M/DID TRUNK' message is displayed.

### DEFAULT DATA

IMMEDIATE

### ACTION

- 1) Press Transfer button and enter 412.  
Display shows:
- 2) Enter desired trunk number.(e.g., 705)  
OR  
Press Volume button to make selection and press Right Soft button to move cursor.  
OR

## [414] ASSIGN CALLER ID TRUNKS (Malaysia and Israel Only)

Allows the system administrator or technician to activate analog loop trunk Caller ID on a per-trunk basis. Activating Caller ID will delay the incoming ring indication at the operator by two ring cycles to allow for the collection of the calling party data.

Each trunk has the following options:

No	Option	Description
0	NORMAL	This is not a Caller ID trunk.
1	CID TRUNK	This is a Caller ID trunk.

NOTE

### Bellcore type data

Supports Bellcore type data only for Caller ID, others type will not supports.  
Available in Australia, Israel and Italy only.

## CONDITIONS

- Before setting CID display, check if the RCM or RCM2 option card is mounted on the MCP card of the OfficeServ 500 system.
- The trunk line must be that of a phone service provider that provides CID.

## DEFAULT DATA

ALL TRUNKS: NORMAL

## ACTION

- 1) Press Transfer button and enter 414.  
Display shows:
- 2) Dial trunk number.(e.g., 705)  
OR  
Press Volume button to select trunk and press Right Soft button to move cursor.  
OR

## [415] REPORT TRUNK ABANDON DATA

Allows the system administrator or technician to enable or disable the reporting of abandoned Trunk Line calls for which CID, CLIP information has been collected on a per-trunk basis. There are two options for this MMC as follows:

No	Option	Description
0	REPORT: NO	Abandoned call records for incoming calls with CID information will not be printed on SMDR or stored in the system call abandon list. These records will continue to be stored in the station review list.
1	REPORT: YES	Abandoned call records for incoming calls with CID information will be printed on SMDR and stored in the system call abandon list. These records will also be stored in the station review list.

### CONDITIONS

In order for these abandoned call records to print on SMDR, MMC 725 SMDR OPTIONS Option 11 Print Abandoned Call Records must be set to YES.

### DEFAULT DATA

ALL TRUNKS REPORT: YES

### ACTION

- 1) Press Transfer button and enter 415.  
Display shows:
- 2) Dial trunk number.(e.g., 705)  
OR  
Use Volume button to select trunk and press Right Soft button to move cursor.
- 3) Dial 1 for YES or 0 for NO  
OR

## [416] ASSIGN E & M/DID RINGDOWN

This MMC defines which ring destination table an E & M or DID trunk will follow for incoming calls. There are three options for each trunk as defined below.

No	Option	Description
0	FOLLOW INCOM DGT	When a trunk is set to this option calls will ring at the destination that matches the digits received from the Trunk line.
1	FOLLOW DID TRANS	When a trunk is set to this option calls will ring at the destination defined in MMC 714 that matches the digits received from the TRUNK LINE
2	FOLLOW TRK RING	If this option is selected, press the Right Soft button and 'NO. RCV DIGIT': will appear on the display. Here is where the number of incoming digits from Trunk Line must be entered (0 through 4). When a trunk is set to this option calls will ring at the destination defined in MMC 406 for that trunk. If the destination defined in MMC 406 is a VMAA port or group then the system will repeat the digits received from the CO to the port when it answers.

### CONDITIONS

R2MFC trunk lines only support the 'FOLLOW INCOM DGT' and 'FOLLOW DID TRANS' options.

### DEFAULT DATA

FOLLOW INCOMING DIGIT

### ACTION

- 1) Press Transfer button and enter 416.  
Display shows:
- 2) Enter desired trunk number.(e.g., 705)  
OR

## [420] PRS SIGNAL

Used on a per-trunk basis to define if a Trunk line is to be either a Metering Pulse(MPD) or a Polarity Reversal Signal(PRS) trunk.

A Meter Pulse Trunk will detect a C.O provided meter pulse. A Polarity Reversal trunk will detect the line reversal signal which may be provided by the Trunk Line When the other party answers the outgoing call or the outside party clears the call.

There are three types of PRS mode: PRS 1, PRS 2 and PRS 3.

Type	Description
PRS 1	When first PRS is detected, call duration is started. When second PRS is detected, call duration timer stopped. The call is not released until hanging-on.
PRS 2	When first PRS is detected, call duration timer is started. When second PRS is detected, call duration timer is stopped and call is released.
PRS 3	The call duration timer starts based on the timer. When first PRS is detected, call duration timer is stopped and call is released.

### CONDITIONS

- If the trunk is designated as PRS detection, the call duration timer will be started and the results printed on the SMDR record.
- PRS detection is also essential for dropping a trunk-to- trunk conversation which is unsupervised by an internal party.

### DEFAULT DATA

NORMAL(NONE)

### ACTION

- 1) Press Transfer button and enter 420.  
Display shows:
- 2) Dial desired trunk number.(e.g., 705)  
OR  
Press Volume button to select trunk and use Right Soft button to move cursor.
- 3) Dial 0 for PRS 1, 1 for PRS 2, 2 for PRS 3 or 3 for MPD or 4 for NORMAL.  
OR  
Press Volume button to scroll through options and use Left or Right Soft button to return to step 2.

## [427] PRI OPTIONS

This MMC allows the technician to program a PRI trunk board.

No	Option	Description
0	CHANNEL ANY	When this option is set to YES, the system will place calls on any free channel of that PRI if the channel chosen by the user is busy. If set to NO, you will receive a busy signal if they attempt to access a busy channel even if the other channel on that PRI is free.
1	PRI MODE	PRI access mode select.
	NORMAL	Point to Point NORMAL. This operates like a standard telephone line with one CO number per channel and ring according to MMC 406.
	DID	Point to Point Direct Inward Dial. This operates in a similar manner to an analog DID circuit with multiple CO numbers pointed to a single channel and translated within the system(MMC714) to a single device.
2	DLSEND	PRI dial sending mode select.
	ENBLOCK	Digits will be collected and sent in a single block similar to a Cell phone.
	OVERLAP	Digits will be sent as they are dialed by the user.
3	CLIP TABLE	Used to select the Calling Party Number to send to the network. In case of NONE, MMC405 CO TRUNK NUMBER is sent to the network. In other cases, MMC 323 Calling Party Number entry corresponding with the selected number is sent to the network.
4	NB TYPE	Used to select the type of the Calling Party Number to send to the network.
	UNKNOWN	Unknown number
	INT.NAT	International number
	NATIONAL	National number
	NETWORK	Network specific number
	SUBSCRIB	Subscriber number
	EXTEN	Local number
	ABBREV	Abbreviated number
5	NB PLAN	Used to select the type of the Calling Party Number Plan to send to the network.
	UNKNOWN	Unknown numbering plan
	ISDN	ISDN numbering plan(CCITT E.163-164)
	DATA	Data numbering plan(CCITT X.121)
	TELEX	Telex numbering plan(CCITT F.69)
	NATIONAL	National standard numbering plan
	PRIVATE	Private numbering plan
	EXTEN	Local numbering plan

(Continued)

No	Option	Description
6	CLIR w NUMB	When this option is set to ON, the CLIP number is sent to the network even though the CLIP restriction flag is set. 0. OFF 1. ON

## CONDITIONS

- Before setting the PRI program, the J2 jumper of the TEPRI board must be set to 'ON' for PRI mode.
- After changing this program, execute 'MMC 425 BRI AND PRI CARD RESTART' to apply the new setting.

## DEFAULT DATA

CHANNEL ANY: YES  
 PRI MODE: DDI  
 DLSEND: OVERLAP  
 CLIP TABLE: NONE  
 NB TYPE: UNKNOWN  
 NB PLAN: UNKNOWN  
 CLIR w NUMB: OFF

## ACTION

- 1) Press Transfer button and enter 427.  
Display shows:
- 2) Dial first PRI trunk number in PRI card.(e.g., 730)  
OR  
Press Volume button to make selection and press Right Soft button.
- 3) Enter option number to make selection.  
OR  
Press Volume button to make selection.
- 4) Press Volume button to make selection.  
Then press Right Soft button.
- 5) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

**[428] BRI OPTIONS**

Assigns several options on a per-BRI basis and there are different options depending on whether the BRI is programmed as a trunk or station in MMC 423.

**OPTIONS FOR BRI PORTS PROGRAMMED AS TRUNKS**

No	Option	Description
0	CHANNEL ANY	When this option is set to YES, the system will place calls on any free channel of that BRI if the channel chosen by the user is busy. If set to NO, you will receive a busy signal if they attempt to access a busy channel even if the other channel on that BRI is free.
1	BRI MODE	BRI access mode select.
	P-P NOR	Point to Point Normal. This operates like a standard telephone line with one CO number per channel and ring according to MMC 406.
	P-P DID	Point to Point Direct Inward Dial. This operates in a similar manner to an analog DID circuit with multiple CO numbers pointed to a single channel and translated within the system(MMC714) to a single device.
	P-M NOR	Point to Multi-point NORmal. This type of circuit operates in a similar manner to P-P NORmal but allows multiple devices to be attached to the circuit. Ringing is defined in MMC 406.
2	P-M MSN	Point to Multi-point MSN. This setting is used when the line uses the MSN supplementary service. Ringing is defined in MMC 429.
	DLSEND	BRI dial sending mode select.
	ENBLOCK	Digits will be collected and sent in a single block similar to a Cell phone.
3	OVERLAP	Digits will be sent as they are dialed by the user.
	CLIP TABLE	Used to select the Calling Party Number to send to the network. In case of NONE, MMC405 CO TRUNK NUMBER is sent to the network. In other cases, MMC 323 Calling Party Number entry corresponding with the selected number is sent to the network.
4	NB TYPE	Used to select the type of the Calling Party Number to send to the network.
	UNKNOWN	Unknown number
	INT.NAT	International number
	NATIONAL	National number
	NETWORK	Network specific number
	SUBSCRIB	Subscriber number
	EXTEN	Local number
	ABBREV	Abbreviated number
5	NB PLAN	Used to select the type of the Calling Party Number Plan to send to the network.
	UNKNOWN	Unknown numbering plan

MMC 423	S/T MODE
MMC 714	DID NAME AND NUMBER TRANSLATION

## [429] MSN DIGIT

Provides a method of assigning an incoming MSN call to a specific station. If any entry in MSN DIGIT TABLE matches an incoming call's called party number, either the specific station is alerted, if it is programmed to accept the call, or the call is cleared if it is programmed to reject the call.

If the incoming called party number does not have a matching entry in the MSN table, MMC 406 ringing destination is alerted or the call is released by option.

You can give each MSN number to a specific station and you can select call waiting option: when a destination is busy, the incoming call must be cleared or camped-on to the station(which is alerted to the call).

There is a total of eight entries on a trunk basis and each entry consists of the following fields:

Field	Description
DIGIT	Digits to be received. There is a maximum of 12 digits
RING 1-6	These numbers correspond to the six ring plan destinations for this MSN. The destinations can be either stations or station groups.
CALL WAIT	Toggles YES or NO: if YES then the call will be camped-on at busy destination while NO gives busy indication.
OPTION	if Accept then the selected destination party will be alerted. If Reject then the call will be cleared.

### CONDITIONS

- A BRI card must be installed in the system. Otherwise, the 'NO BRI CARD' message is displayed.
- For each BRI access, two adjacent ports are assigned. You need only change the value for one of the two ports; the value for the other port will be changed automatically.

### DEFAULT DATA

NONE

**ACTION**

- 1) Press Transfer button and enter 429.  
Display shows:
- 2) Enter trunk number.(e.g., 704)  
OR

## [434] CONNECTION STATUS

This read only MMC will confirm the connection status of stations or trunks.

Display status actually displays the status of a station or trunk at the time requested.

If a conference is in progress with the selected trunk or station the display will show one of the conference parties and an arrow(→). The technician or system administrator can then display the next parties in the conference. If a station or trunk is in an idle state the display will show 'IDLE'. If the station or trunk selected is not a valid selection the display will show 'INVALID DATA'. If the station or trunk is made busy by the CPU the display will show 'MADE BUSY'. If the station is in busy state with no other connection, the display will show 'BUSY' only.

## [500] SYSTEM-WIDE COUNTERS

Used to set the values of the system counters. The counters are listed below with a brief description of each.

No	Counter	Default	Description
0	ALARM REM. CNTER	5	The number of times that an alarm reminder will ring a station before cancelling. RANGE = 1-99.
1	AUTO RDL COUNTER	3	The number of times the system will redial an outside number after the auto redial feature has been activated. RANGE = 1-99.
2	DISA CALL CNTER	99	Sets the maximum number of intercom calls that can be made after accessing a DISA line. RANGE = 1-99.
3	DISA LOCK CNTER	3	Number of attempts the system will allow to incorrectly access a DISA line before locking out the DISA line. RANGE = -99
4	NEW CALL COUNTER	99	Number of times the system will allow a user to signal New Call on a Trunk line during one call. RANGE = 1-99.
5	UCDS VISUAL ALARM	0	Used to set the Visual alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0-25.
6	UCDS AUDIO ALARM	0	Used to set the Audio alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0-25.
7	UCD CS LEVEL 1	0	Provides call wait indication level 1 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0-25.
8	UCD CS LEVEL 2	0	Provides call wait indication level 2 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0-25.

## [501] SYSTEM TIMERS

Allows the technician to adjust individual timers as necessary.

### TIMER TABLE

Timer Name	Default	Range Unit	Description
AA INT DGT TIME	5	1-25 SEC	When the AA card is installed, this timer determines the inter digit time for AA call processing. If this timer expires before valid digits are received by the AA card, the call will be routed to the AA invalid digits destination.
AA NO ACT TIME	10	1-25 SEC	When the AA card is installed, this timer determines the time that the AA card will wait for a first digit for AA call processing. If this timer expires before a digit is received, the call will be routed to the AA no action destination.
AA TRANS TIME	2	0-25 SEC	After this timer, the system will compare received digits from AA card with the AA translation table entry and transfer to the proper destination.
ALARM TIME	100	0-2500 MIN	This is the time the system alarm key will start ringing after the alarm key has been silenced.
ALERT TONE TIME	1000	100-2500 MSEC	This timer sets the duration of the attention tone preceding a call to a phone in the Voice Announce or Auto Answer mode. This tone will also precede a forced Auto Answer call.
ALM REM.INTERVAL	25	1-250 SEC	This timer controls the time length between ring attempts at a station when alarm reminder is set.
ALM REM RING OFF	10	1-25 SEC	This timer controls the length of the ring cycle duration when alarm reminder is set at a station.
ATT. RECALL TIME	30	0-250 SEC	This is the length of time a transfer recall will ring at a station before recalling the operator.
AUTO REDIAL INT.	30	1-250 SEC	This timer controls the time between attempts after RETRY dialling is set on a station.
AUTO REDIAL RLS.	45	1-250 SEC	This timer controls the duration of a Ring No Answer condition on a retry number dialed before the auto redial is automatically cancelled.

(Continued)

Timer Name	Default	Range Unit	Description
CALLBACK NO ANS	30	1-250 SEC	This timer controls the time before the callback is automatically cancelled when a callback detects Ring No Answer.
CAMP ON RECALL	30	0-250 SEC	This timer controls the duration of time a camped-on call will stay at a destination before recalling to the transferring station.
CID MSG RECEIVE	6	1-25 SEC	The amount of time that the system will allow a valid message from the analog CID trunk.
CID DSP ALLOC TM	500	0-900 MS	The delay time that allocate the CID receiver after trunk incoming detection
CID DISPLAY TIME	5	1-25 SEC	The amount of time that the Caller ID information remains on the phone's display.
CO CONFIRM TIME	3	0-250 MIN	According to MMC 314 CO CONFIRM type, the outgoing call will be disconnected after this timer or the outgoing caller will hear the confirm tone every this time.
CO-CO DISCONNECT	20	1-250 MIN	This timer monitors the duration of an unsupervised conference; when it expires, both trunks are disconnected.
CONFIRM TONE TM	1000	100-2500 MSEC	The tone heard when a feature is activated or deactivated.
CRD TONE INT TM	30	0-250 SEC	This is the call record tone interval time. An entry other than zero will cause a tone to be heard by all the parties in a recorded conversation. The range for the tone is 001(every second) to 255(every 255 seconds). A value of 000 means no tone. Requires SVMi card.
DIAL PASS TIME	3	0-25 SEC	This timer monitors the duration of time before connecting the transmit of the phone to the trunk side of an outgoing call.
DISA DISCONNECT	30	1-250 MIN	This timer controls the maximum duration of a DISA call.
DISA LOCK OUT TM	30	1-250 MIN	This timer controls the duration of time a DISA call is not allowed to be made after the DISA error counter has expired(MMC 500).

(Continued)

Timer Name	Default	Range Unit	Description
DISA NOANS DISC.	30	0-250 SEC	This timer controls the duration of time a DISA call is disconnected by force when called party does not answer.
DISA PASS CHECK	30	1-250 MIN	This timer defines the time period before the system clears the incorrect passcode counter.
DISPLAY DELAY TM	2	1-250 SEC	This timer controls the duration a display is shown in the LCD display. This timer also controls the duration of time that error tone is heard.
DOOR LOCK RELES.	500	100-2500 MSEC	This timer controls the duration of time the door lock relay will be activated.
DOOR RING DETECT	50	10-250 MSEC	This timer controls the duration of time before a call is answered by the door phone.
DOOR RING OFF TM	30	1-250 SEC	This timer controls the duration of ringing at the door ring destination before automatically cancelling.
E-HOLD RECALL TM	45	0-250 SEC	This timer controls the duration of time a call is held exclusively at a station before recalling.
FIRST DIGIT TIME	10	1-250 SEC	This timer controls how long the system will wait for dialling to begin before dropping the dial tone and returning the you to error tone.
HOK FLASH MAX TM	800	20-2500 MSEC	This timer monitors the duration of a hook switch flash to ensure that the flash is valid and not a line noise or an accidental hookswitch bounce LONGEST duration.
HOK FLASH MIN TM	350	20-2500 MSEC	This timer monitors the duration of a hookswitch flash to ensure that the flash is valid and not a line noise or an accidental hookswitch bounce SHORTEST duration.
HOOK OFF TIME	100	20-2500 MSEC	This timer controls the time before dial tone is sent to a single line station.
HOOK ON TIME	1000	20-2500 MSEC	This timer sets the minimum amount of time that the system will recognize as an SLT hang up.
INQUIRY RELEASE	30	1-250 SEC	This timer monitors the duration of the interaction of the Soft button to determine when to return the LCD back to a normal status. This timer affects only display phones.

(Continued)

Timer Name	Default	Range Unit	Description
INTER DIGIT TIME	10	1-250 SEC	This timer controls the grace period between dialling valid digits before dropping the call and returning you back to error tone.
ISDN INT DGT TM	7	1-15 SEC	This timer controls the grace period between dialling valid digits and the end of the dialling string on an ISDN call.
KMMC LOCK OUT TM	60	10-250 SEC	This timer controls the grace period between programming actions while in a programming session. The timer automatically returns the system to secure programming status.
LCR ADVANCE TIME	5	1-250 SEC	This timer controls the duration of time before selecting the next allowable route when a station is allowed to route advance.
LCR INTER DIGIT	5	1-250 SEC	This timer controls the grace period between dialling valid digits before accessing a trunk.
LONG KEY DETECT	600	0-2500 MSEC	This timer controls the time a key must be held down before the key press is repeated.
LONG KEY REPEAT	300	0-2500 MSEC	This timer controls the time between repeated digits on a long key press.
MS LED ON TIME	10	1-10 SEC	This timer controls the duration a Manual Signaling key will remain on after use.
OFF HOOK RING INT	15	1-250 SEC	This timer controls the duration of time between ring bursts to a user who has a camped-on call.
OHVA ANSWER TIME	10	1-250 SEC	This timer controls the time duration of an OHVA call before automatic rejection.
PAGE TIME OUT	20	1-250 SEC	This timer controls the duration of a page announcement.
PAGE TONE TIME	500	100-2500 MSEC	This timer controls the duration of tone burst heard over the page prior to the page announcement.
PARK RECALL TIME	45	0-250 SEC	This timer controls the duration of time a call is parked before recalling to the call park originator.
PC-MMC LOCK TIME	5	1-60 MIN	This timer monitors the PCMMC activity, drops the link if no action is created by PCMMC and returns the system back to secure program status.
PERI UCD REPORT	5	3-99 SEC	This timer is the interval that a periodic UCD report is provided to an SIO port.

(Continued)

Timer Name	Default	Range Unit	Description
POWER DOWN TIME	2000	500-9900 MSEC	This timer monitors the power to the ROM pack to begin shutdown status.
R2MFC INCOM TIME	14	10-30 SEC	This timer controls the duration of waiting R2MFC signal before being made error status in case of R2MFC incoming call.
R2MFC INTER TIME	2500	2000-7000 MSEC	After this time, the system decides the user finishes his/her dialling and processing next procedure on R2MFC outgoing call.
R2MFC OUTGO TIME	14	10-30 SEC	This timer controls the duration of waiting R2MFC signal before being made error status in case of R2MFC outgoing call.
RECALL DISCONNECT	2	1-250 MIN	This is the time an attendant recall will ring before being disconnected.
RECALL WAIT TIME	15	0-250 SEC	This is the time any recall(hold or transfer) continues to recall at your station before it recalls to the operator.
ROUTE OPTIMIZE	5	0-250 SEC	When the call is made via Q-SIG signaling, the route optimization is activated after this time.
SMDR START/DP	30	1-250 SEC	This grace period timer starts SMDR recording for rotary
SMDR START/DTMF	15	1-250 SEC	This grace period timer starts SMDR recording for touchtone dialling. This timer also controls the LCD duration timer on the phones. The duration time displayed and the SMDR time duration will be the same.
SYS HOLD RECALL	45	0-250 SEC	This timer determines the time calls can be left on hold before recalling back to the holding station. This is a system-wide timer. Setting timer to 000 will defeat this feature and no recalling will take place.
TRANSFER RECALL	20	0-250 SEC	This timer determines the time transferred calls ring before recalling. This is a system-wide timer.
TRK AUTOMOH DISC	60	1-250 SEC	If the TRK AUTO MOH option is set to ON, the system will automatically answer incoming trunk calls and play MOH. In such a case, the phone will continue to ring while the MOH is played. If the call is not answered within the TRK AUTOMOH DISC time, the call will be disconnected automatically.

(Continued)

Timer Name	Default	Range Unit	Description
TSW CONN. DELAY	0	0-10 SEC	When incoming trunk makes outgoing call to another trunk, the system connects voice path after this time.
UCDS AUDIO ALARM	0	0-990 SEC	When an AA card is installed and the digital UCD package enabled, this counter determines the maximum number of seconds a call has been waiting at the UCD group before the UCD group's SUPV key begins to flash along with an audio alarm. For more UCD alarm conditions, see MMC 500.
UCDS VISUAL ALARM	0	0-990 SEC	When an AA card is installed and the digital UCD package enabled, this counter determines the maximum number of seconds a call at the UCD group before the UCD group's SUPV key begins to flash as an alarm. For more UCD alarm conditions, see MMC 500.
VMS UCD MSG TIME	5	1-99 SEC	When this timer expired, the call return to idle member. Requires SVM-800.
VOICE DIAL DELAY	8	5-15 SEC	This timer monitors the duration of interaction between main software and Voice Dialler. If there is no response from Voice Dial card within this time, the system decide the voice dialling is fail.
VOIP RE-ROUTE TM	5	2-25 SEC	When the outgoing call is made via VOIP trunk and does not receive ACK message from called party within this time, the call is treated as fail.

NOTE

**When the value is '0'**

Certain timers are disabled when the value is '0'.

**[502] STATION-WIDE TIMERS**

Allows certain station timer values to be changed on a per-station basis or for all stations.

No	Item	Description
0	NO ANS FWD	This timer controls how long the station will ring before Forward on No Answer takes place.(1250 sec)
1	DTMF DUR.	This timer governs the duration of DTMF digits which are transmitted to an external VMS system port. This can be used when a VMS system fails to recognize the default DTMF digit duration being transmitted from the SLT port.(1009900 ms)
2	FDGT DELY	This timer will be valuable for the system administrator to insert a suitable delay before generating DTMF digits for In Band integration.(1009900 ms)
3	OFFHK SEL.	This timer controls the grace period before placing an internal/external call as programmed in MMC 306.(0250 sec)
4	EFWD DELAY	This timer controls the External Call Forward feature which will allow a station to ring before the call is placed on external call forwarding. (1250 sec)
5	CC RNG DLY	When the station does not answer incoming call within this time, the other stations with CC key of that station will be ringing together. This feature only applies to the station call and station group call does not serviced. (10 sec)

**[503] TRUNK-WIDE TIMER**

Allows certain trunk timer values to be changed on a per-trunk basis or for all trunks. It is not advisable to change these values, with the exception of trunk Flash Time, without assistance from Technical Support.

No	Item	Description	Range
00	ANS.BAK TM	ANSWER BACK TIME. This timer is used for certain types of E & M signaling and does not affect normal CO lines.	0-2500 MSEC
01	CLEARING	This timer ensures that a call is fully disconnected at the CO by preventing CO access outgoing or receiving incoming ring between a disconnect and the expiration of this timer.	100-9900 MSEC
02	CO SUPV TM	CO SUPERVISION TIME. this is the minimum length of loop open disconnect received from the CO that will be seen as a valid hang up on the system.	10-2500 MSEC
03	DTMF DUR.	DTMF DURATION. This is the length of the DTMF digits that will be sent to the CO on this line.	100-9900 MSEC
04	F-DGT DELY	First-DIGIT DELAY. This is the length of time the system will wait for CO line conditions to stabilize after seizure before sending DTMF digits.	100-9900 MSEC
05	FLASH TIME	This is the duration of the momentary open sent on a circuit when FLASH key is pressed.	20-2500 MSEC
06	NO RING TM	This is the length of time the system will wait after detecting a ring burst on a line before deciding the call has disconnected.	1-25 SEC
07	PAUSE TIME	This is the length of time the system will wait before sending the next digit for a pause in a speed dial bin.	1-25 SEC
08	PRS DET TM	This means the duration of PRS signal pulse. If the PRS signal is reversed when opposite party is answered and maintain the status before the opposite party disconnect the call, the PRS DET TM must be set to 0.	0-2500 MSEC
09	RNG DET TM	RING DETECT TIME. This is the minimum length of ring signal the system will regard as a valid ring.	10-2500 MSEC
10	WINK TIME	This is the duration of the acknowledgment signal that the system will send on an E & M circuit	100-300 MSEC
11	MF/DP INT	This is the interval between sending digit. In case of DTMF signal, over the 500ms will be serviced as 100 ms.	100-9900 MSEC
12	MFR DLY TM	This is a delay time to allocate the MFR after incoming trunk is detected. This is to prevent the wrong detection of DTMF signal by noise.	0-25 SEC

(Continued)

No	Item	Description	Range
13	DISA ANSWR	This is a delay time to answer the DISA trunk call or to answer the trunk when TRK AUTO ANSWER is set to ON(MMC400)	0-60 SEC
14	CONN DELAY	This is a delay time to connect voice path when the users make outgoing call via loop trunk. This is to prevent the user hearing noise when loop trunk is seized.	0-2500 MSEC

## [506] TONE CADENCE

Provides the ability to customize the tone cadence on a system-wide basis.

The system can provide eleven types of tone and three types of tones provided from Central Office or PBX system can be detected. Please call Technical Support before changing any cadences as some systems may require default settings.

No	Item	Description
00	BUSY TONE	The called station is busy.
01	CONFIRM/BARGE	A feature has been successfully activated/cleared or a Barge In with Tone has been performed.
02	DIAL TONE	The system is ready to interpret key presses/dialed digits.
03	DND/NO MORE	The called station is in DND or has no free CALL buttons.
04	ERROR TONE	An error has been made.
05	HOLD/CAMPON	This is the system generated hold tone.
06	MSGWAT TONE	This is the tone heard at an SLT with a message waiting.
07	RGBACK TONE	The called station is ringing.
08	RING TONE	This is the tone heard from ROP device or Loud Bell when these devices are called.
09	TRANSFERER TONE	This is the tone heard when the transfer button is pressed or an SLT hook flashes.
10	DID RINGBACK	This is the tone heard by the outside party when they dial a DID number.
11	CO BUSY TONE	This is used to detect the busy tone provided from Central Office or PBX system.
12	CO RINGBACK	This is used to detect the ring back tone provided from Central Office or PBX system.

## [507] ASSIGN RING PLAN TIME

Use this MMC to program Ring Plans time settings. Ring Plans provide six separate ringing destinations based on day of the week and time of day. The start time within a plan is the time the system will switch from one ringing destination to the next. The end time is the time the system will switch from that plan to the previous plan.

A RPO(Ring Plan Override) key is not needed as the system will switch automatically; however, it is helpful to have a dedicated button so the status can be manually changed if needed. If a ring plan has no time entry the ring plan defaults to ring plan 1. The ring plans correlate with all MMC's that program ring or termination destinations and station and trunk COS.

Use the following example of assigning Ring Plans:

RING PLAN	Start Time	End Time
(MON: 1)	ST: 0000	END: 23:59
(MON: 2)	ST: 0800	END: 2200
(MON: 3)	ST: 1000	END: 2000
(MON: 4)	ST: 1200	END: 1800
(MON: 5)	ST: 1300	END: 1600
(MON: 6)	ST: 1400	END: 1500

Using a 24 hour clock in the example above notice that the END time is within the same 24 hour period. The system will stay in the last active Ring Plan from the previous day until the end time which is 23:59. Monday starts the Ring Plan 1 at 00:00. The system will stay Ring Plan 1 until 08:00 and will stay in Ring Plan 2 until Ring Plan 3 starts. As each ring Plan start it will override the previous Ring Plan.

If a Ring Plan ends and there are no additional Ring Plans the system will default to the Ring Plan with time that extends past the expired ring plan time.

### CONDITIONS

- When using a Samsung built-in Voice Mail Card that only has day/night mode, the day/night must be set for each RING PLAN at 'MMC 758 VM DAY/NIGHT'.
- Ring Plans must be programmed in sequence. IE. RP 1, 2, 3, 4 etc.
- A Ring Plan cannot be omitted. IE. RP 1, 2, 5 etc.
- A higher numbered Ring Plan cannot have a START time before a lower numbered Ring Plan

NOTE

#### Ring Plan 1

Ring Plan 1 is the default Ring Plan of each day. If no Ring Plan destination is input the operator group is the default destination.

## DEFAULT DATA

## [508] CALL COST

Allows the system administrator to set the Call Cost attributes generated by the system during a call. This information can be displayed on the phone LCD during a call or as an SMDR record.

No	Item	Description
0	UNIT COST PER MP	When the system is installed to receive MP on a C. O. outgoing call. It is used for generating total call cost by multiplying it by the number of pulses. Allows a maximum value of 9999.
1	CALL COST RATE	This generates additional call cost calculated by multiplying this rate by the original call cost. Ranges from 100 through 255.

CAUTION

### Call Cost

Changing this value when there is a call in progress may result in an inaccurate call cost. This Meter Pulse Detection(MPD) facility requires the MPD version of the trunk card.

### CONDITIONS

## [511] MSG WAITING LAMP CADENCE

This MMC defines the cadence (flash rate) of single line telephone message waiting lamps on phones connected to an MWSLI supported card. There are two main choices for the MW lamp cadence available, these being continuous and interrupted as described below.

No	Item	Description
0	INTERRUPTED	The MW lamp will flash at a rate determined by the timer settings. The shortest on time is 100 ms and the longest on time is 3000 ms. The timer is adjusted in 100 ms increments.
1	CONTINUOUS	When an MWSLI port has a message, the lamp will be lit steady.

### CONDITIONS

MWSLI SUPPORTED CARDS ONLY

### DEFAULT DATA

INTERRUPT LED: 1000MS-ON 1000MS-OFF

### ACTION

- 1) Press Transfer button and enter 511.  
Display shows:
- 2) Press 0 or 1 to select CADENCE.  
OR  
Press Volume button to make selection.  
Press Right Soft button to advance step 3.
- 3) Dial new values for interrupt times.(four digits)  
Press Right Soft button to move cursor back.  
If valid entry, system returns to step 2.  
Press Left Soft button to move cursor back.  
If valid entry, system returns to step 2.
- 4) Press Transfer button and enter to exit.  
OR  
Press Speaker button to save and advance to next MMC.

## [601] SIGN STATION GROUP

This MMC is used to build all station groups. There are 40 programmable groups available in a M system and 80 for a L system.

The options for setting up these groups are as follows:

No	Option	Description
0	TYPE	<p>This is the type of group you are creating and can be one of the following:</p> <ul style="list-style-type: none"> <li>0 NORMAL: Used to assign stations in a ring group. The members can be stations, common bell contacts or Ring over Page relays.</li> <li>1 VMAA: Used to group a number of voice mail port extensions. These must have been defined in MMC 207 as VMAA ports or they cannot be entered here. Check all programming in MMC 726 to ensure that the In band DTMF codes are properly set.</li> <li>2 UCD: Used to build a UCD group. The system will support two methods of UCD: <ul style="list-style-type: none"> <li>- TYPE 1 UCD <p>The group OVERFLOW/N-ANS destination(see below) is defined as an SLT port to which you must connect some type of announcement device to play to callers while they are on hold.</p> <p>Please note that this type of UCD group has the following limitations.</p> <ul style="list-style-type: none"> <li>a) The announcement device must be able to terminate the announcement with a hook flash and a transfer back to the UCD group.</li> <li>b) Only one caller at a time can hear the announcement.</li> <li>c) Each caller connected to the announcement must hear the announcement in its entirety.</li> <li>d) It is possible that a new caller may 'jump ahead' in the queue if a previous caller is currently connected to the announcement device.</li> </ul> </li> <li>- TYPE 2 UCD <p>The group OVERFLOW/N-ANS destination(see below) is defined as an AA port or group. This will only work if an AA card has been installed in the system.</p> <p>The digital announcer in the AA card will supply two recorded announcements to callers in queue. The first announcement is played only once, the second announcement will repeat for as long as the caller is in queue.</p> <p>This type of UCD group has the following advantages:</p> <ul style="list-style-type: none"> <li>a) No external device need be installed to provide an announcement.</li> <li>b) Multiple callers can hear the announcement(s) simultaneously.</li> <li>c) Callers hearing the announcement will be transferred to a free UCD group member(agent) as soon as the agent becomes available.</li> </ul> </li> </ul> </li> </ul>

(Continued)

No	Option	Description
0	TYPE	<p>d) The callers place in queue is always maintained. Additional programming for this type of UCD group is in MMC 607. There is a maximum of 20 UCD groups available on a system due to availability of system resources.</p> <p>3 AA: This is used to group a number of AA ports. An Auto Attendant(AA) card must be installed in the system to do this.</p> <p>4 BI-VMS: This is the voice mail group for the Built-In Voice Mail Card. When a Built-In Voice Mail Card is installed, group 529 must be programmed as a BI-VMS group on a M system and group 549 must be used for a L system. Group 529(or 549) are fixed for BI-VMS use. If BI-VMS is not installed in the system, group 529(or 549) can be used as any other group can be used.</p> <p>5 MESSAGE: Used to group a number of extensions to serve as a message desk or message group. When one of the stations in this type of group leaves a message to another station the messaged station will return the message to the message group so any member can answer the call. If a station is a member of more than one message group, then any message indications made by that station would be for the first numerical message group they are a member of. It is not recommended to program stations in to multiple station groups.</p> <p>6 S0 STN GRP: This is used to group a number of S0 station for video conference.</p>
1	RING MODE	<p>Each group can have one of the following ring modes. This will decide how calls are placed to the group.</p> <p>0 SEQUENTIAL: The stations listed as 'members'(see below) will be called on a first available basis. Calls will first go to the first member, if the first member is busy, calls will go to the second member, if the second member is busy, calls will go to the third member etc. This type of group is useful for placing the bulk of the incoming calls to a selected individual, with other members only getting the calls when the first member is busy. The number of members allowed for a sequential group is 48.</p> <p>1 DISTRIBUTED: The first call will go to the first member, the second call will go to the second member, the third call will go to the third member. This type of group is useful for evenly distributing the call among all group members. The number of members allowed for a distributed group is 48.</p> <p>2 UNCONDITIONAL: Calls are placed to all group members simultaneously. This reduces the number of members of the groups to 32. If a group member is busy, they can receive off hook ring if defined in MMC 300. This ring mode option is not available for UCD or VMAA groups. The SGR INC BUSY option is not available for unconditional ring mode.</p>

(Continued)

No	Option	Description
2	OVERFLOW	This is the timer value that will cause unanswered calls to a group to begin also ringing the NEXT PORT(see below) after this timer has elapsed. If set to 000, no overflow will take place.
3	GROUP TRANSFER	This is a timer that will determine how long Trunk Line calls transferred to the group will ring at the group before recalling. If set to 000, no recall will take place.
4	NEXT PORT	This is the station or group number that callers will also ring at if the OVERFLOW feature has been programmed. The OVERFLOW DESTINATION can be defined as: 1 COMMON BELL There are up to 3 Common bells available on L system and 1 on M system. Because there is a common bell port on each MISC card. 2 RING OVER PAGE The ROP port can be defined as the NEXT port. 3 STATION OR STATION GROUP. Any station or station group can be defined as the NEXT port.
5	MEMBER	List all members that are to be in the group. Up to 48 members for the system are allowed in each group, but stations can be assigned to multiple station groups
6	NEXT HUNT	The length of time a call will ring at a station before it hunts to the next group member.
7	GROUP BUSY	When this option is set to ON, a busy signal will be sent to the caller if all group members are busy. When this option is set to OFF, the ring back tone is sent to the caller even if all group members are busy. Obviously UCD is an exception to this rule. This option only works when MMC 210 SGR INC BUSY is set to OFF. When MMC 210 SGR INC BUSY is set to ON, all station groups will follow this setting.
8	GRP AUTOANS	When this option is set to ON, a group call follows auto answer option also.

NOTE

**Calls to a group**

Calls to a group do not follow the call forwarding instructions of any stations in the group.

**CONDITIONS**

- A station can be assigned to all station groups. A station group can normally accommodate up to 48 members, but only up to 32 members if the RING MODE is 'UNCONDITIONAL'.
- To enable off-hook ring for calls incoming to busy members, set the OFFHOOK RING of MMC 300 CUSTOMER ON/OFF PER STATION OFFHOOK RING to 'ON'. Even in this case, however, the off-hook ring is enabled only when the RING MODE is 'UNCONDITIONAL'.

**DEFAULT DATA**

## NORMAL GROUP

**ACTION**

- 1) Press Transfer button and enter 601.  
Display shows:
- 2) Dial group number.(e.g., 505)  
OR

## [606] ASSIGN SPEED BLOCK

Provides a means of adding or deleting speed dial blocks to the system or an individual phone. With the ability to delete a block or blocks of speed dial, it will not be necessary to waste these on such items as voice mail, DPIMs or stations that do not require the ability to use speed dial. The Free List will show how many bins are left to be assigned.

A library of up to 2500 speed dial numbers may be allocated as needed. The system list can have up to 500 numbers(950 numbers when MMC 861 SYSTEM SPEED BIN is set to MAX 950) and each station can have up to 50 numbers. Speed dial numbers are assigned in blocks of ten. Each speed number may contain up to 24 digits.

## [607] UCD OPTIONS

Sets up UCD options when an AA card has been installed. MMC 601 must have already been used to define a UCD group with an overflow destination of an AA port or group. (A group is preferred over a port because a group allows multiple paths into the AA card and therefore has greater traffic handling capabilities.) When a group overflow timer in MMC 601 expires, the caller will be routed to the AA card. It is here that the caller is played the UCD 'FIRST MESSAGE' and 'SECOND MESSAGE' while in queue. This will continue until an agent becomes free or the caller is transferred to a final destination.

This MMC includes options to select messages to play to a caller. These messages can be as follows:

Message	Description
MESSAGES 01-48	These can be created using the AAREC Soft button (programmed on phones by using MMC 722 or 723). A total of two minutes of message time is available and can be divided up into 1 to 48 messages.
MESSAGES 49-64	These are pre-programmed as follows: 49 'Thank you for calling, please dial your party's extension number'. 50 'Invalid number, please try again'. 51 'I'm sorry, there is no answer'. 52 'I'm sorry, that station is busy'. 53 'One moment please'. 54 'Transferring'. 55 'I'll transfer you'. 56 'Good-bye'. 57 'Thank you'. 58 'Please hold for the operator'. 59 'Please hold for assistance'. 60 'Thank you, good-bye'. 61 'I'm sorry, all stations are presently busy'. 62 'I'm sorry, all stations are still busy'. 63 'Please call back later'. 64 'I'm sorry, not a valid selection'.

The following program options apply:

No	Option	Description
00	FIRST MESSAGE	<p>After the caller has overflowed from the UCD group, the first message will immediately play. For instructions on how to make these recordings, see the User Instructions Section, Auto Attendant and Uniform Call Distribution System Administration. The default message is #61 'I'm sorry, all stations are presently busy'.</p> <p>This message will only be played once for the caller.</p>
01	SECOND MESSAGE	<p>If no agent has become free after the UCD recall time(see UCD Recall), the caller will be played the second message. For instructions on how to make these recordings, see the User Instructions Section, Auto Attendant and Uniform Call Distribution System Administration. The default message is #62 'I'm sorry, all stations are still busy'.</p> <p>This message will be repeated for as long as the caller is in queue, at an interval specified in the UCD Recall Timer below.</p>
02	EXIT CODE	<p>While the caller is hearing a message(but not during MOH), the caller may dial the DTMF digit specified here and be transferred immediately to the final destination(see Final Destination). The exit code is optional and does not need to be used. If used, the first and second messages may be modified to provide instructions on its use.</p>
03	RETRY COUNT	<p>The UCD program is designed to route a caller to a 'final destination' after a programmable number of 'loops' through the UCD message. The range of this counter is 0 to 99. 00 means that there is no retry counter and the caller will remain in the UCD queue until answered. Any non zero value will route a caller through the UCD loop that many times before going to the final destination. The UCD will route calls to the final destination immediately if all members of the group are either out of group or in DND.</p> <p>Example: If this counter is set to 02, callers reaching a busy group will hear the first UCD message, be placed on hold, hear the second UCD message, be placed on hold, and finally hear the second message again before being transferred to the final destination.</p>

(Continued)

No	Option	Description
04	FINAL DESTINATION	<p>This is the final destination for the caller if not answered by a UCD agent.</p> <p>This destination is only reached if(a) the caller dials an exit digit during a message or(b) the retry count has expired. The final destination can be a station number, a group number, a disconnect or another plan. Plans are entered by pressing A button plus two digits 01-12. A disconnect is entered as a destination of NONE(Hold button).</p> <p>If the final destination is a voice mail port, the port will receive a FWD from UCD group integration message. The final destination will forward or overflow.</p> <p>If the forward to destination is a voice mail port the port will receive FWD from UCD group integration message. If the final destination is not forwarded, the call will ring or camp on to the final destination indefinitely.</p> <p>To ensure that you do not get a situation where all the call buttons are busy on the final destination it is advisable to make the final destination a group(even if the group has only one station in it.)</p>
05	RING NEXT TIME	<p>This timer must be shorter than the overflow timer in MMC 601. If a higher value is entered, the display will show invalid entry. In the case where a UCD group has the ring next timer set at 000, an unanswered call will rotate evenly among all agents until it is answered. The UCD greetings will be heard during this routing process, but can be removed by defining the UCD messages in MMC 607 as unrecorded message numbers.</p> <p>This will simulate a circular hunt group.</p>
06	UCD RECALL TIME	<p>After a caller has heard a UCD announcement, he/she will be placed on hold until an agent becomes available or the UCD recall timer expires. When the UCD recall timer expires, the caller will again hear the UCD announcement. The range is 00-99. The default is 10.</p>
07	MOH SOURCE	<p>This option determines what Music on Hold source the callers will be connected to between messages. The choice is either an external source, AA message defined in MMC 739, or a Built-In Voice Mail Card message defined in MMC 756.</p>
08	WRAP-UP TIME	<p>This option will make a UCD agent unavailable to receive additional UCD calls after hanging up from the last one. This is to allow agents to complete work associated with the previous call before the next call begins ringing. The range is 000-250. The default is 010.</p>

(Continued)

No	Option	Description
09	AUTO LOG OUT	This YES/NO option determines if a station will automatically log out of the UCD group when the RING NEXT timer expires. This setting will be ignored if the RING NEXT timer is set to 000.
10	ALLOUT → FINAL	This YES/NO option determines if calls forward to the UCD final destination when all stations are logged out of the UCD group. If no UCD final destination is assigned then the call will disconnect.
11	AGENT PIN NO	This YES/NO option determines if an agent is required to enter an Agent ID when logging on to this group. The Agent ID can be entered in MMC 717.
12	GROUP BUSY NEXT	This YES/NO option determines if all agents are busy, specifies whether the next port is called immediately during overflow time.

## [615] MGI GROUP

This optional program sets designated MGI ports for specific services. This allows 'grading' of MGI card(s) for traffic conditions. The MGI ports can be segregated into groups. Keep in mind that any entries made here can be ineffective, if conflicting entries exist in MMC616.

No	Type	Description
0	LOCAL ITP	This determines what MGI ports can be used with ITP phones across a private IP network
1	PUB IP ITP	This determines what MGI ports can be used with ITP phones on a public IP network.
2	VOIP NTWK	This determines what MGI ports can be used for enhanced proprietary Samsung VoIP networking between OfficeServ 500 systems across a private IP network.
3	PUB IP NTWK	This determines what MGI ports can be used for enhanced proprietary Samsung VoIP networking between OfficeServ 500 systems on a public IP network
4	VOIP TRUNK	This determines what MGI ports can be used as industry-standard H.323 or SIP VoIP trunks for communications across a private network
5	PUB IP TRK	This determines what MGI ports can be used as industry-standard H.323 or SIP VoIP trunks for communications on a public network
6	MGI3 NEEDED	This determines what MGI ports can be used for T.38 facsimile communications across a private network.
7	PUB IP MGI3	This determines what MGI ports can be used for T.38 facsimile communications on a public network.
8	ITP PAGED	This determines what MGI ports can be used with station page to ITP phones across a private IP network

The MGI ports can be allow two selection modes: Sequential or Distributed.  
The members of each selection are the actual ports on the MGI card(s).

### CONDITIONS

## [616] MGI USER

This optional program selects which specific MGI ports will be dedicated on a per-port basis for IP station/trunk devices. If this MMC is not utilized, allocation of MGI ports will be controlled by MMC615. By defining dedicated MGI port usage, the IP station/trunk selected will always use the port programmed. MGI ports can be assigned for digital stations(2XX~2XXX), private and public ITP stations(32XX), VoIP Networking trunks(83XX), H.323 trunks(84XX), SIP trunks(85XX) and MGI3 facsimile. Only one assignment per MGI port is permitted. Any entries made here will override entries made in MMC615.

MMC 701                      ASSIGN COS CONTENTS

## [701] ASSIGN COS CONTENTS

Similar to MMC 700 but does not allow a copy command. This MMC is primarily used for creating a new class of service. If the unsupervised conference feature is allowed, a programmed CONF key must be available to allow re-entry into a conference call. There are 30 classes of service available.

This MMC is divided into 5 categories.

No	Category	Description			
0	TOLL LEVEL	TOLL	LEVEL		
		0	A	Follow toll class A(Unrestricted)	
		1	B	Follow toll class B in MMC 702, 703

## TOLL RESTRICTION

MMC 702	TOLL DENY TABLE
MMC 703	TOLL ALLOWANCE TABLE
MMC 704	ASSIGN WILD CHARACTER
MMC 709	TOLL PASS CODE/SPECIAL CODE TABLE

## [702] TOLL DENY TABLE

Provides a way to make toll restriction(call barring) very easy and flexible. There are 500 entries allowed in the deny and each entry index can be assigned to a class of service. Each index can have up to 12 digits. With the use of wild cards(MMC 704 Assign Wild Character), more flexibility can be built into toll restriction. Wild cards can be used repeatedly in the dial string, limited only to what is allowed or denied in MMC 704.

There are six toll levels, B to G, that are programmable. Toll level A is set as unrestricted by default and toll level H is set as in-house only by default.

## [705] ASSIGN SYSTEM SPEED DIAL

Enables the assignment of system speed dialling numbers. There are up to 500 entries available(950 entries when MMC 861 SYSTEM SPEED BIN is set to MAX 950) for programming(see MMC 606). Each speed dial number consists of a trunk or trunk group access code followed by a separator and up to 24 digits to be dialed. These dialed digits may consist of 0-9, and #. If the system recognizes a valid trunk or trunk group access number, it will automatically insert the separator.

MMC 305            ASSIGN FORCED CODE

**[709] TOLL PASS CODE/SPECIAL CODE TABLE**

This MMC provides a means to program three trunk code tables as described below.

No	Special Code	Description
0	PBX CODE	This table contains up to five entries and is used to identify the trunk access codes needed for toll restriction to be properly applied when the system is used either behind a PBX or with CENTREX-supplied dial tone. Toll restriction will only be applied on trunks flagged as PBX in MMC 401 if a trunk access code entered in this table is dialed. Toll restriction will be applied to the digits following the trunk access code.
1	SPECIAL CODE	This table identifies to the system dialling rules the special feature codes used to activate central office custom calling features such as CID Block and call waiting disable. The special feature codes can be used on a per call basis without affecting LCR or toll restriction programming. There is a maximum of ten(10) entries available each of which may be up to four digits long.
2	TOLL OVERRIDE	This table of eight entries is used to identify to the system numbers that will bypass all dialling restrictions. This bypass includes Toll restriction, Trunk access and forced authorization or account codes. Each entry in the table can be up to 14 digits long.
3	OVER USE TRK GRP	This entry designates the trunk group that toll override calls will access.

### RELATED ITEMS

MMC 712            LCR ROUTE TABLE

## [712] LCR ROUTE TABLE

The LCR ROUTE TABLE is responsible for selecting a specific trunk group in the completion of an outward bound call. This table works in conjunction with LCR DIGIT TABLE, LCR TIME TABLE, LCR COS TABLE and LCR MODIFIED DIGITS TABLE. After you dial a valid digit string, the system uses the LCR ROUTE TABLE to select a specific predetermined trunk group. There is a maximum number of 32 routes available. If more than one trunk group is available for call completion, the system uses the first designated trunk group and then starts to utilize succeeding trunk groups. If all trunk groups are busy in a selected route, call queue becomes active and allocates trunks as they become available.

## [713] LCR MODIFY DIGIT TABLE

This program entry is also referred to as Outgoing dial Rules. This will give the system the ability to add or delete a digit string or singular digit if needed to complete a call. A perfect example is the adding of a digit '1'. An advantage is to insert a common carrier network access code of 1010288. With these digits inserted, a long distance call will be placed over a local line utilizing the common carrier network. The characters \* and # can also be entered. There are 200 modify digit entries available.

Option	Maximum Number Of Digit Entries
Number of digits to delete	15
Insert(before dialling string)	14
Append(after dialling string)	14

### DIGIT STRING KEY

Insert String + Digit String(delete) + Append String

### CONDITIONS

```

- 6) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

### RELATED ITEMS

MMC 710            LCR DIGIT TABLE

## [714] DID NUMBER AND NAME TRANSLATION

Assigns an incoming DID call to a specific ring plan destination. It also provides a call waiting option, if needed, so that a second incoming DID call can be received. The table is also used to define which MOH source a caller to that DID number will hear when placed on hold. An 11 character name can be added to the number. There are a maximum of 999 entries. If there is no matching number on DID service the call is routed to the operator group.

Definitions of option are as follows:

Option	Description
DGT	Digits to be received from Trunk line Up to 16 digits may be entered.
MOH SOURCE	Allows the technician to select what the calling party will hear in regards to that DID/DNIS number if the call is placed on hold. There are a total of 6 possible music selections(see below).
NONE	Follows the setting in MMC 408 for the trunk the call comes in on.
TONE	A repeated tone is played to the outside party.
INTERNAL CHIME 'OLD FOLKS AT HOME'	This is entered as the directory number of the music source on the MCP2 (371).
EXTERNAL DEVICE	Music Source or Digital announcer. This is entered as the directory number of an external music source.
DIGITAL ANNOUNCEMENT ON AA CARD	This is entered as the directory number of the last AA port of an AA card. For further details on using an AA port as an MOH source please see MMC 739.
VOICE MAIL SOUND FILE	If the system has an optional SVMi card installed, up to 100 custom recorded sound files from the Voice Mail card can be used for MOH sources. Select the SVMi port assigned in MMC 756. For information on creating the sound files see SVMi System Administrator Manual-Recording greeting by number. If you select this option be advised that each VMMOH source requires a dedicated SVMi port/channel.
PRI	DID priority option. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest. When calls into station group come and group members are all busy, the system will assign a priority to the DDI number so that calls from a high priority DDI number will be placed at the front of the group queue. If this option sets NO, the longest call that placed at the group queue has the highest priority.

(Continued)

Option	Description
1: XXX, 2: XXX, 3: XXX, 4: XXX, 5: XXX, 6: XXX	Ring plan and destination during each ring plan. The destination can be a station, station group, trunk or trunk group. If trunk or trunk group is selected the trunks must be programmed as E & M trunks to allow the received digits to be re-sent on the facility(s). This is referred to as DID Repeat digits over tie line. An entry of the character 'B' means to repeat the received digits. 'A' setting indicates AUTO ANSWER, and 'D' setting indicates DISA.
CW	Call waiting Yes/No . Allow a second DID call to be received
MC	The number of maximum call count. When this sets 99, this feature will not work. When this sets 0, if a call comes that matched DID digits and DGT field then the system will be reject call. When this sets between 1 to 98, if a call comes that matched DID digits and DGT field then the system counts same DID digits call, and in case of the count is same or higher than this value, the system sends busy signal to caller.
DC	The number of digits to delete. This is useful with Tandem switching, mixed numbering plans and DID Repeat digits over tie line. Maximum number of digits that can be deleted is 16.
NAME	Input up to 11 characters to identify call. Refer to 'MMC [104] STATION NAME' for descriptions on INPUT CHARACTERS.

## CONDITIONS

If an E & M line is designated as FOLLOW DID TRANS at 'MMC 416 ASSIGN E & M/DID RINGDOWN', calls are terminated according to the station direct dial translation table of 'MMC 714 DID NUMBER AND NAME TRANSLATION'.

## [722] STATION KEY PROGRAMMING

Allows the customizing of programmable buttons on specific electronic phones, AOM, or 64 button module on the system. For phones, buttons 1 and 2 are set as CALL buttons by default. For AOM's and 64 button DSS box's all buttons are set as DS keys by default. Features are entered via dial pad keys by pressing the dial pad number the required number of steps to select the feature. For example, for OHVA, the number 6 is pressed three times. If the BOSS key is required, press 2 for the first letter B and then use the Volume button to change the selection from BARGE to BOSS.

## [724] DIAL NUMBERING PLAN

This MMC allows the technician to change directory numbers for stations, trunks, station groups, trunk groups and feature access codes. The system can be pre-programmed with a default three or four digit numbering for station, station groups and trunk numbers depending on the position of the DIP switches on the MCP2 card. There is an error message provided to prevent the accidental duplication of a directory number or feature access code.

No	Type of Dial No	Description
00	STN DIAL NO.	This is where station directory numbers are changed or assigned. Default: 201-2xx, 3xx(last 319) or 2001-2xxx
01	TRK DIAL NO.	This is where trunk directory numbers are changed or assigned. Default: 701-7xx or 7001-7xxx
02	AA/VD DIAL NO	This is where AA port or Voice Dial port directory numbers are changed or assigned. Default: AA ports: 3951-39xx VD ports: 3981-398x
03	MISC DIAL NO.	This is where directory numbers for relays, MOH ports and the alarm sensor are changed or assigned. Default: Internal CHIME: 371 Internal MODEM: 3999 External MOH: 372-377 External PAGE & Relay: 361-369 Common Bell Relay: 3991-3993 Loud Bell Relay: 3995-3997
04	STNG DIAL NUMBER	This is where station group numbers are changed or assigned. Default: 500-5xx or 5001-5xxx
05	TRKG DIAL NUMBER	This is where trunk group numbers are changed or assigned. Default: The first is 9 or 0, 800-828
06	FEAT DIAL NUMBER	This is where feature access codes are changed or assigned. Dialling codes are entered via the dial pad key by pressing the dial pad number the required steps to select the feature. For example, for OHVA, the number 6 would be pressed three times. NOTE) Please remember that this program is system-wide.
07	S0 STN DIAL NO.	This is where directory numbers for BRI station ports mapping terminal number. Default: 8701-8748
08	DECT STN DIAL NO	This is where directory numbers for DECT terminals. Default: 8801-8899
09	NTWK LCR DIAL NO	This is where additional LCR access codes are entered in the case when two or more OfficeServ 500 system are networked together. Default: NONE

(Continued)

No	Type of Dial No	Description
10	VIRT EXT DIAL NO	This is where virtual station directory numbers are changed or assigned. Default: SLT: 3501-3546, DGP: 3401-3480
11	MGI DIAL NO.	This is where MGI port directory numbers are changed or assigned. Default: 3801-38xx
12	IP STN DIAL NO.	This is where IP-based station directory numbers are changed or assigned. Default: 3201-3299(DESKTOP PHONE), 3301-3399(MOBILE PHONE)
14	VOIP NET DIAL NO	This is where Samsung proprietary switch-to-switch VoIP networking trunk signaling port directory numbers are changed or assigned. Default: 8301-8380
15	H323 TRK DIAL NO	This is where VoIP H.323 trunk signaling port directory numbers are changed or assigned. Default: 8401-8480
16	SIP TRK DIAL NO	This is where VoIP SIP trunk signaling port directory numbers are changed or assigned. Default: 8501-8580

**[725] SMDR OPTIONS**

Allows the system administrator to select the information printed on the SMDR report. The following options may be selected to print on SMDR:

No	Option	Default	Description
00	PAGE HEADER	YES	This option determines whether a page header will print at the top of each page. This would normally be turned off if SMDR is being sent to a Call Accounting machine.
01	LINE PER PAGE	60	This option selects the length of each page to determine when to print the SMDR header. The number of lines may be in the range 01-99.
02	INCOMING CALL	NO	This option determines whether incoming calls will print on SMDR.
03	OUTGOING CALL	YES	This option determines whether outgoing calls will print on SMDR.
04	AUTHORIZE CODE	NO	This option determines whether authorization codes will print on SMDR. If this option is set to NO, system make AUTH field to '****' on SMDR.
05	SMDR START TIME	YES	This option determines whether valid calls will include the minimum call time in total call duration.
06	IN/OUT GROUP	NO	This option allows a message, IN GROUP or OUT GROUP, to be printed in the digits dialed column each time a station enters or leaves a group.
07	DND CALL	NO	This option allows a message, IN DND or OUT DND, to be printed in the digits dialed column each time a station enters or leaves DND.
08	WAKE-UP CALL	YES	This option determines whether stations receiving an alarm reminder call will print on SMDR.
09	DIRECTORY NAME	NONE	This option allows the system administrator to enter a 16 character name which will appear on the SMDR header.
10	CALLER ID DATA	NO	This option can be selected to print Caller ID data received from the Central Office on incoming calls. This option requires the use of a 132 column(wide carriage) printer or an 80 column printer set for condensed print.
11	ABANDON CALL	NO	If this option is set to YES, unanswered calls for which CID information was received will print on SMDR.
13	NO. OF DIAL MASK	0	If this option is set to a numeric value, the selected last digits of the number dialed field will be masked as asterisks(*) on the SMDR print out. Maximum masked digits is 18. First 4 digits will not mask.

(Continued)

No	Option	Default	Description
15	INCOMING ANSWER	NO	If this option is set to YES, the duration of calls ringing before answered will print on SMDR.
16	INTERCOM CALL	NO	This option determines whether intercom calls will print on SMDR.
17	KEY MMC IN/OUT	NO	If set to YES then the SMDR record will show programming being opened and closed in MMC 200 and MMC 800.
20	HOTEL PAGE FEED	END	This option determines where the page feed is inserted on HM REPT.(Hotel/Model Enabled Only)
21	HOTEL START LINE	0	This option determines that the number of empty lines per each page on HM REPT.(Hotel/Model Enabled Only)
23	DID NUM/NAME	YES	If this option is set to YES, received DID information will print on SMDR.
24	ITP REGISTRATION	NO	If set to YES then the SMDR record will show IP-based station to system connect and disconnect.
25	SET RELOCATION	NO	If set to YES then the SMDR record will show set relocated information.

## [726] VM/AA OPTIONS

This MMC is used to define all the in band DTMF codes sent to voice mail ports. These in band codes can be 0-9, A, B or C, and performed two functions.

### CALL AND TYPE INFORMATION

This is a DTMF signaling string sent to a voice mail port when the voice mail port answers a call. This DTMF information tells the voice mail port what type of call it is receiving and where the call is coming from. e.g., call has forwarded from extension 225

### CALL PROGRESS TONES

These are sent to the voice mail system to provide information about the progress of the call. e.g., ring back, busy or disconnect.

Most Voice Mail systems can utilize DTMF in band signaling for more efficient call processing. This MMC has many parameters that can be programmed according to the type of automated attendant and/or voice mail system connected.

### CALL and TYPE INFORMATION

The format of the DTMF data sent to a VM/AA port is as follows:

[CALL TYPE] + [DN1] + [SEPARATOR] + [DN2]

an example of this would be

[FORWARD ALL] from [225] on trunk [703]

Each field can be programmed individually as follows:

Field	Description	Default
EXTENSION FOR DN1	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN1 field indicating that a station is ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send station data in the DN1 field.	No
TRUNK FOR DN1	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN1 field indicating that a trunk is ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send trunk data in the DN1 field.	No
EXTENSION FOR DN2	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN2 field indicating the originating station of the call ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send station data in the DN2 field.	No

(Continued)

Field	Description	Default																																								
TRUNK FOR DN2	If set to yes, when the voice mail auto attendant system answers a call the system will send data in the DN2 field indicating the originating trunk of the call ringing the VMAA port. If set to no, when the voice mail auto attendant system answers a call the system will not send trunk data in the DN2 field	No																																								
SEPARATOR	When both DN1 and DN2 are used, a digit defined here is sent between DN1 and DN2 so the VMAA system can determine where DN 1 stops and where DN 2 starts. The separator can be DTMF 0 through 9, *, #, A, B or C.	No																																								
DISCONNECT SIGNAL	This is the call progress digit sent to the VMAA port in place of a disconnect open. The digit defined here is sent three times.	C																																								
CALLER ID NUMBER	If set to yes, when the voice mail auto attendant system answers a call the system will send Caller ID data as DTMF tones to the VMAA port.	No																																								
CALL TYPE ID	This is the DTMF digit that is sent first in the in band digit string and can identify any of the following call types	-																																								
	<table border="1"> <thead> <tr> <th>No</th> <th>Call Type</th> <th>Description</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>DIRECT CALL</td> <td>A call originating directly from another station in the system.</td> <td>*</td> </tr> <tr> <td>1</td> <td>ALL FWD CALL</td> <td>This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD ALL set.</td> <td>#</td> </tr> <tr> <td>2</td> <td>BSY FWD CALL</td> <td>This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD BUSY set.</td> <td>#</td> </tr> <tr> <td>3</td> <td>NOA FWD CALL</td> <td>This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD NO ANSWER set.</td> <td>#</td> </tr> <tr> <td>4</td> <td>RECALL</td> <td>A call is recalling the VM/AA port after being transferred and not answered.</td> <td>#</td> </tr> <tr> <td>5</td> <td>DIR TRK CALL</td> <td>A Trunk Line call has gone directly to VM/AA(e.g., trunk 717 DIL to VM/AA).</td> <td>*</td> </tr> <tr> <td>6</td> <td>OVERFLOW</td> <td>A call has OVERFLOWED to the VM/AA port from a station group.</td> <td>#</td> </tr> <tr> <td>7</td> <td>DID CALL</td> <td>A DID call has called the VM/AA port.</td> <td>B</td> </tr> <tr> <td>8</td> <td>MESSAGE CALL</td> <td>A message button or message reply feature code has been used to call the VM/AA port.</td> <td>*</td> </tr> </tbody> </table>	No	Call Type	Description	Default	0	DIRECT CALL	A call originating directly from another station in the system.	*	1	ALL FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD ALL set.	#	2	BSY FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD BUSY set.	#	3	NOA FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD NO ANSWER set.	#	4	RECALL	A call is recalling the VM/AA port after being transferred and not answered.	#	5	DIR TRK CALL	A Trunk Line call has gone directly to VM/AA(e.g., trunk 717 DIL to VM/AA).	*	6	OVERFLOW	A call has OVERFLOWED to the VM/AA port from a station group.	#	7	DID CALL	A DID call has called the VM/AA port.	B	8	MESSAGE CALL	A message button or message reply feature code has been used to call the VM/AA port.	*	
No	Call Type	Description	Default																																							
0	DIRECT CALL	A call originating directly from another station in the system.	*																																							
1	ALL FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD ALL set.	#																																							
2	BSY FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD BUSY set.	#																																							
3	NOA FWD CALL	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD NO ANSWER set.	#																																							
4	RECALL	A call is recalling the VM/AA port after being transferred and not answered.	#																																							
5	DIR TRK CALL	A Trunk Line call has gone directly to VM/AA(e.g., trunk 717 DIL to VM/AA).	*																																							
6	OVERFLOW	A call has OVERFLOWED to the VM/AA port from a station group.	#																																							
7	DID CALL	A DID call has called the VM/AA port.	B																																							
8	MESSAGE CALL	A message button or message reply feature code has been used to call the VM/AA port.	*																																							

(Continued)

Field	Description			Default
PROGRESS TONE ID	These are the DTMF codes that is sent to the VMAA port in place of regular progress tones. For example, when a VMAA port goes off hook to originate or transfer a call, instead of hearing normal dial tone, it will hear DTMF 'BA'. Progress tones can greatly increase the efficiency of a VMAA system because it is easier and quicker to detect DTMF than a busy, ring back or DND tone. Progress tones can identify any of the following.			-
	No	Call Type	Description	Default
	0	DIAL TONE	Dial Tone	BA
	1	BUSY TONE	Busy Tone	4
	2	RINGBAK TONE	Ringback Tone	5
	3	DND NO MORE	DND or No More Call Button Error	6
	4	HDSET ANSWER	Off Hook Answer	3
	5	SPKER ANSWER	On Hook Answer	2

### GENERAL RULES

- 1) 201 is talking to a trunk and presses TRANSFER plus the station number, but the station is forwarded to VM/AA and VM/AA answers. When this happens, if 201 presses TRANSFER again to return to the trunk, the VM/AA port is not on hold. It is disconnected.
- 2) A VM/AA port leaves a message indication for a station. When the station returns the message, any available port in the VM/AA group should ring, not only the one that left the message.
- 3) A VM/AA port leaves a message for a station. When the station returns the message, the MESSAGE LED is not automatically turned off. If a VM/AA system turns on the MESSAGE LED, the VM/AA system must turn it off.
- 4) If DTMF call progress tones are not enabled, the system sends regular call progress tones.
- 5) When a VM/AA port calls a station that is in the AUTO ANSWER or VOICE ANNOUNCE mode, the phone will be forced to ring.
- 6) All calls to a VM/AA port or group ring with Trunk line ringing cadence, not intercom ring cadence.

### EXAMPLES OF VM/AA OPERATION (IN BAND DTMF DIGIT STRING)

In the following example, all call and type data is turned on unless otherwise stated. X is the separator digit, all-default values are used in these examples and [ ] is not used.

A DIL 701 calls a VM/AA port or group:

[\*] + [701] + [ ] + [ ]

In the above example, if Trunk Line information is not used:

[ ] + [ ] + [ ] + [ ] (Nothing is used)

DIL 701 calls a call-forwarded station(205):

[#] + [205] + [X] + [701]

In the above example, if forward information is not used:

[ ] + [205] + [X] + [701]

In the above example, if forward and DN2/Trunk Line information is not used:

[ ] + [205] + [ ] + [ ]

DIL 701 calls group 501 that overflows to VM/AA:

[#] + [501] + [x] + [701]

In the above example, if overflow information is turned off:

[ ] + [ ] + [ ] + [ ] (Nothing is sent)

A DID call rings the VM/AA directly:

[B] + [9999] + [ ] + [ ]

9999 are the DID digits from Trunk Line

In the above example, if did information is turned off:

[ ] + [9999] + [ ] + [ ]

A station transfers(blind or screened) a call(Trunk Line, DID or intercom) to VM/AA group or port. When the transferring station hangs up(blind transfer):

[ ]+[ ]+[ ]+[ ](Nothing is sent)

A station(202) transfers a Trunk Line call(702) to a station(225) that is Call Forward All to a VM/AA group or port. When the transferring station hangs up(blind transfer) and the VM/AA group or port answers:

[#] + [225] + [x] + [702]

A station(202) transfers a Trunk Line call(702) to a group(501) that overflows to a VM/AA group or port:

[#] + [501] + [X] + [702]

In the above example, if overflow information is turned off:

[ ]+[ ]+[ ]+[ ](Nothing is sent)

A station(205) calls a VM/AA port or group:

[Q]+[205]+[ ]+[ ]

In the above example, if direct information is turned off:

[ ]+[ ]+[ ]+[ ](Nothing is sent)

A station(205) calls using MESSAGE key:

[Q]+[205]+[ ]+[ ]

In the above example, if message information is turned off:

[ ]+[ ]+[ ]+[ ](Nothing is sent)

A call(702) recalls back from station 225 to the VM/AA group:

[#]+[225]+[x]+[702]

In the above example, if recall and DN2/CO information are turned off:

[ ]+[ ]+[ ]+[ ](Nothing is sent)

## [728] CID TRANSLATION TABLE

Allows the system administrator or technician to associate a CID number received from the central office with a name programmed in this translation table. If there is no match between a received number and a name in this table, 'no CID name' will be displayed.

The translation table consists of 1000 entries for a M system and 2000 for a L system. Each entry is comprised of a ten-digit(14 digits allowed) telephone number and a 16-digit name.

## [732] AA TRANSLATION TABLE

AA translation tables are responsible for routing calls based on digits dialed. There are 12 translation tables available. Each table can be assigned to one or more plans in MMC 733 Auto Attendant Plan Programming. A translation table consists of a number of 100 entries. Each entry number has two fields to program: the first field is for the digits received by the caller and the second field is for the destination or action.

The destination field can be a station number, station group or another plan. Plans are entered by pressing special key A plus two digits 01-12. If a voice mail group is entered, the call will be transferred to the voice mail system with the appropriate in band digit packet to indicate a Forward All call from the station number dialed by the caller.

The digits defined in the first field of this MMC [dialed digits] must be a valid station number.

If the digits programmed as a destination are a voice mail port the voice mail port will receive an in band packet of DTMF equal to [FWD from EXTENSION NUMBER DIALED].

There are a number of special characters that are used in translation tables. They are as follows:

\* = Used to represent any digit.

P = (Special Key A) Plan. Used to assign a plan as a destination(P01-P12).

B = (Special Key B) Buffer. When used in the destination field, transfers the call to the same extension as the digits dialed by the caller.

C = (Special Key C) Change greeting or Ring Plan.

S = (Special Key E) System Speed Dial Number. Used to assign a System Speed Dial number as a destination.

**DESTINATION:**

Consider the following entry examples.

Digits	Dest	Comments
0	0	Caller will be transferred to 0.
2**	B	If a caller dials any three digit extension number beginning with 2, the call will be transferred to the extension number dialed.
48#2	C	If a caller dials 48#2, the current plan's greeting may be changed. 48#2 is essentially a special passcode for changing the current greeting or ring plan.
1	526	If a caller dials 1, the call will be transferred to group 526.
5	P08	If a caller dials 5, the call will be transferred to plan 08.

NOTE

Number conflicts like 2 and 23 or 56 and 567 are allowed in translation table programming. In these cases, the system will compare received digits from AA card after AA TRANS time and transfer to the proper destination.

Entries in the translation table will also provide the following features which are useful if a mailbox owner does not have a telephone on the system, but does have a SVMi voice mailbox.

If a caller dials # + nnn he will leave a message directly in the mailbox specified in the destination.

If a caller dials \* + nnn he will log into the mailbox specified in the destination.

If the translation table contains an entry like nnn = D(D is selected using the fourth Soft button) callers dialing nnn will leave a message directly in the mailbox specified in the destination.

**NOTES ABOUT CHANGING RING PLANS AND ALTERNATE GREETING:**

- **MANUAL SERVICE**
  - 1) When the phone system changes ring plans, the AA greetings will also change as programmed in MMC 733.
  - 2) When the AA alternate greeting passcode is entered the caller may input a digit to change the ring plan. This means that a customer who wants to put the system in a different ring plan can call in remotely and do it.
  - 3) When the alternate greeting passcode is entered, the system will allow to select a ring plan. If a RP(ring plan) key is programmed on the system it will FLASH. The normal status of this light in a ring plan is on steady. A flashing RP key corresponding to the ring plan indicates the remote ring plan has been set. If a RTO key is available it will also flash.

- 4) If the alternate greeting is not activated but the ring plan is changed the system will remain in the selected ring plan until the next scheduled ring plan change. If the alternate greeting is activated the system will remain in the existing ring plan or the selected ring plan until the alternate greeting is manually deactivated.
- 5) To implement ring plan changes and /or the alternate greeting the caller must enter the number or 'passcode' that implements the special key program. After the passcode is entered the caller must enter 2 digits. The first digit selects the desired ring plan to change to(1-6) or 0 for no change. The second digit activates the alternate message.  
0 for no alternate message or 1 for alternate message.

Example: Caller dials into the system and is answered by the AA card. The caller then input the special code or 'password' 48#2. The caller then dials 3 to select ring plan 3 and then dials 1 to turn on the alternate greeting. The system now ring according to ring plan 3. Ring plan 3 is directed to the AA card and the caller is now answered by the alternate greeting.

## [733] AA PLAN TABLE

Used to program each AA plan. A plan is a module that processes a call. There are twelve plans available in each AA card. Each plan can route a caller to any group, extension or another plan. Each port can answer calls with a different plan as defined in MMC 735.

This MMC includes options to select messages to play to a caller. These messages can be as follows:

Message	Description
MESSAGES 01-48	These can be created using the AAREC Soft button(programmed on phones by using MMC 722 or 723). A total of two minutes of message time is available.
MESSAGES 49-64	These are pre-programmed as follows: (The announcement may be different according to the AA MSG ROM) 49 'Thank you for calling, please dial your party's extension number'. 50 'Invalid number, please try again'. 51 'I'm sorry, there is no answer'. 52 'I'm sorry, that station is busy'. 53 'One moment please'. 54 'Transferring'. 55 'I'll transfer you'. 56 'Good-bye'. 57 'Thank you'. 58 'Please hold for the operator'. 59 'Please hold for assistance'. 60 'Thank you, good-bye'. 61 'I'm sorry, all stations are presently busy'. 62 'I'm sorry, all stations are still busy'. 63 'Please call back later'. 64 'I'm sorry, not a valid selection'.
PLAN MESSAGE (RING PLANS 01-06)	This is the message that will be heard by the caller when the AA port answers a call if the telephone system is in a particular ring mode or if another message has been selected by the AA administrator. This message has a default selection of AA ROM message number 49 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
ALTERNATE MESSAGE	This is the message that will be heard by the caller when the AA port answers a call if this message has been selected by the AA administrator. This message has a default selection of 49 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.

(Continued)

Message	Description
INVALID MESSAGE	Determines what message will play if the caller dials invalid digits repeatedly until the retry counter expires. Invalid digits are digits not contained in the translation table for this plan. The invalid message will repeat for the value contained in the retry counter. This message has a default selection of ROM message 64 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
NO ANSWER MESSAGE	Determines what message will play if the caller is recalled to the AA port because of a no answer. This message has a default selection of ROM message number 51 but it can be replaced with a customized message(01-48) or with any other ROM message (49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
TRANSFER MESSAGE	Determines what message will play if the caller is transferred. This message has a default selection of ROM message number 53 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
BUSY MESSAGE	Determines what message will play if the caller selects a busy station. This message has a default selection of ROM message number 52 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
NO STATION MESSAGE	Determines what message will play if the caller dials an invalid extension(not installed). This message has a default selection of ROM message number 50 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64). This retry message will repeat for the value contained in the retry counter. See Retry Count. For instructions on how to create these recordings see Special Applications, Auto Attendant/Uniform Call Distribution.
NO ACTION MESSAGE	Determines what message will play if the caller does not act. This message has a default selection of ROM message number 59 but it can be replaced with a customized message(01-48) or with any other ROM message(49-64).
CAMP-ON	Determines if calls will be transferred to busy stations. Calls transferred to busy stations will be camped-on. The default value is OFF.
ANSWER DELAY	Sets how many rings will occur before this plan answers a call. The default value is 01 second.
RETRY COUNT	Determines how many selection errors a caller may make before being transferred to the invalid digits destination. In case of no action, will not follow this option.

(Continued)

Message	Description
TRANSLATION TABLE	Determines what translation table this plan will use.(see MMC 732 Auto Attendant Trans Table) The default value is same number of plan number.
BUSY DESTINATION	Determines the destination for the call if the selected destination is busy. This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
NO ANSWER DESTINATION	Determines the destination for the call if the selected destination does not answer. This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
NO ACTION DESTINATION	Determines the destination for the call if the caller makes no response(this is also the destination for rotary dial callers). This can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
INVALID DESTINATION	Determines the destination for the call if the caller dials invalid digits after the retry counter has expired. This destination can be another station, station group or plan. Plans are entered by pressing A button plus two digits 01-12.
NOTE ABOUT TRUNK SIGNALING	UCD is designed to hold a call until an agent is available. It is therefore essential that a customer gets a disconnect from the Trunk Line when a caller hangs up. If not the call may be held in the UCD loop until answered. This could be a long time, and when an agent finally does answer there would be no one there.

## [736] AUTO ATTENDANT MESSAGE MATCH

It is possible to make 48 customized recordings on the AA ports of the AA card.  
For instructions on how to create these recordings, see User Instructions, Auto Attendant and Uniform Call Distribution System Administration.

It is important to understand the difference between recordings and messages.  
For example, you have customized recording 01 as 'Thank you for calling' and you have customized recording #02 as 'One moment please'. By default, message 01 is recording 01. When message 01 is selected as part of AA or UCD programming, the caller hears 'thank you for calling'(recording 01). When message 02 is selected, the caller hears 'one moment please'(recording 02). If you need a new message that says 'thank you for calling, one moment please,' you can record this as recording 03 and play it as message 03 but this uses some of the RAM storage on the AA card.  
An easier way is to link recordings 01 and 02 to produce message 03.

This is the purpose of this MMC. We simply tell the system that message 03 equals recording 01 plus recording 02. In this MMC, the top line of the phone display indicates a message number and the bottom line indicates the recording numbers.

### CONDITIONS

Not applicable when playing using [AAPLAY] button.

### DEFAULT DATA

EACH MESSAGE IS EQUAL TO THE CORRESPONDING RECORDING

### ACTION

- 1) Press Transfer button and enter 736.

## [740] DECT SYSTEM CODE

Used to identify your DECT system and the handsets your register with your system.

The DECT system Code for your system is actually made up of two fields: the System ID which is three hexadecimal digits in the range 000 to 999; and the Auth Code(short for Authentication Code) which is four hexadecimal digits in the range 0000 to 9999. The default values are 000 and FFFF respectively.

### The DECT System Code/Register handsets Change

Only the system administrator and/or installer should be allowed access to change the DECT System Code and Register handsets.

### CONDITIONS

- You must use this MMC to change the default values for the values you have been provided with by your supplier. If you do not change the defaults you will not be able to register handsets.
- Once you have entered your new System ID and Auth Code using this MMC you can then begin registering your handsets with the Auth Code. The system checks the Auth Code entered for each handset against the DECT Auth Code. If it is the same, the registration procedure continues; otherwise, the system rejects the registration procedure.

### DEFAULT DATA

AUTH CODE: FFFF

SYSTEM ID: 000

### ACTION

- 1) Press Transfer button and enter 740.  
Display shows:
- 2) Dial 0 for AUTH code or 1 for system ID.  
OR  
Press Volume button to make a selection and press Right Soft button to move cursor.
- 3) If option is AUTH code, enter AUTH CODE via dial keypad.(e.g., 1234)

### DISPLAY

```

## [748] COSTING DIAL PLAN

The COSTING DIAL PLAN is used to analyze the leading dialed digits of a dialed number and determine what DIAL PLAN it is to follow. Data entry for this program is in three fields: ENTRY, DIGITS and COST RATE table reference.

### DIGITS

Up to 500 entries may be made. Each entry can be up to ten digits. These are the entries that will be searched to find a match with the digits dialed by the station making the call. This is a leading digits table and the system will look for the exact leading digits in the table that match the number dialed. For example, if a user dials 1305 and the COSTING DIAL PLAN contains 1, 1308 and 1312, the dialed digits will be matched to 1 because 1308 and 1312 do not form a complete match. When this table is created by the technician or when any new entries are added, the system automatically places all entries in numerical order.

Wild cards(\*) can be used to represent any digit. The Toll Restriction Wild Character assignment(MMC 704) is common with Call Costing and Toll Restriction. When all entries are used, [LAST ENTRY] is displayed.

### DIAL PLAN

This shows in the programming display as DP and represents a pattern(1-7, 8). This pattern is used by MMC 433 TRUNK COST RATE, to determine the correct billing according to MMC 749 RATE CALCULATION TABLE

When the system finds a DIAL PLAN match for the digits dialed, the system checks MMC 749 to see what RATE CALCULATION to use for costing the call.

### EXAMPLES

When a station user dials a number, the system will search the COSTING DIAL PLAN to find a match. If 13056 is dialed and this MMC contains entries 1, 13, 1305 and 1401, 1305 is the closest match and this entry will be selected. If 1305 is dialed and this MMC contains entries 1, 13, 13056 and 1401, no action will be taken until the station user dials another digit. If the next digit is 6, the 13056 entry is the closest match and this entry will be selected, but if the next digit is anything other than 6, the 13 entry is the closest match.

Whenever a new entry is added, the system will sort all entries in numerical order because this is the logical order in which the system analyzes digits. Wild cards are checked after exact digits. If 1813 and 18\*\* are entered, the system will check 1813 first. If no match is found, it will check 18\*\*.

## [749] RATE CALCULATION TABLE

The RATE CALCULATION TABLE is used to define the billing charges for each COST RATE. These rate tables correlate with the Trunk Cost Rate and the Costing Dial Plan. There are eight call costing rates. Each rate has the following data fields.

No	Type	Description
0	FIRST INTERVAL DURATION	This is the amount of time at the beginning of each call to which a fixed cost is applied. The range is from 0 to 999 seconds, for example, 180 seconds(three minutes).
1	FIRST INTERVAL COST	This is the dollar cost for the first interval duration. The range is from 0 to 999, for example, 345(\$3.45).
2	SECOND INTERVAL DURATION	This is the amount of time for the duration of each billing increment after the first interval has expired. The range is from 0 to 999 seconds, for example, 006 seconds(six seconds).
3	SECOND INTERVAL COST	This is the dollar cost for each billing increment. The range is from 0 to 999, for example 100(\$1.00).
4	SURCHARGE	This is a one-time charge that is applied to the call over and above the time charges. The range is from 0 to 999, for example 150(\$1.50).

## [751] ASSIGN MAILBOX

This MMC is only used for the Samsung Plug in Voice Mail Card. It assigns each station or group as having a mailbox(yes or no). When stations or groups are flagged as YES, during Voice Mail card power up mailboxes will be created for each directory number with a 'YES' entry.

Once the Voice Mail database has been created new boxes can be added.

- a) Through Voice Mail administration,
- b) By adding a new mailbox in this system and cycling system power.

If a mailbox is to be removed it must be done through Voice Mail administration.

If a station that do not have an associated voice mailbox, call the Voice Mail system they will be answered by the Voice Mail system main greeting.

### CONDITIONS

Mailboxes that are needed for people that do not have an extension must be added through Voice Mail programming.

### DEFAULT DATA

ALL STATIONS: YES

ALL GROUPS: NO

### ACTION

- 1) Press Transfer button and enter 751.  
Display shows:.
- 2) Dial station number.  
OR  
Press Volume button to scroll the number and press Right Soft button to move cursor.

## [752] AUTO RECORD

This MMC is only used for the Samsung Plug in Voice Mail Card.

Some specific station in the phone system can be assigned to automatically record conversations. When this option is set, all incoming, all outgoing, or all calls(incoming or outgoing) can be recorded.

When this option is selected a specific port can be assigned for each station set to automatic conversation recording or the effectiveness of this feature cannot be guaranteed.

In this MMC you can assign:

- Station number: Which station use this feature.
- Mailbox number: What mailbox the conversation are recorded in.
- I, O or B: What type of conversations are recorded, in, out or both.
- Voice mail port number: What port is dedicated to the station.

A maximum of 8 stations can this feature in the system.

The same port cannot be assigned to more than one station. Attempts to do this will result in an error message.

### **When using the auto record feature**

Before using the auto record feature make sure that you are not violating any state or federal laws. Some states require that the recorded party be notified. SAMSUNG is not responsible for any illegal use of this feature.

## **CONDITIONS**

When a Voice Mail port is assigned here, it is automatically removed from the Voice Mail group defined in MMC 601.

## [756] ASSIGN VM MOH

This MMC is only used for the Samsung Plug in Voice Mail Card.

This MMC is used to assign each port a Music on Hold source for the system from a sound file located on the Built-In Voice Mail Card hard disk drive. The 100 available sound files are defined as numbers 5000 to 5099.

Basically Built-In Voice Mail Card supports various music for numbers 5000 to 5099.

If you want to use default Built-In Voice Mail Card support music, select the number.

Otherwise, make sure you record the sound file first. The next step is to assign the sound file to a Built-In Voice Mail port. For example, if you record sound file 5025 you would associate 25 with a specific Built-In Voice Mail port, e.g., 225. This will dedicate the port for use only as MOH and remove it from group 529 or 549.

Now 225 will show up as a valid music source in MMC 308, 309 and 408.

Each Music on Hold source assigned here requires one Built-In Voice Mail port.

NOTE

### **When the first Built-In Voice Mail port is used for VM MOH**

If the first Built-In Voice Mail port is used for VM MOH, it must be disabled before boot up since Built-In Voice Mail Card and the system use port 1 during boot up to exchange critical information. For this reason we suggest you use the last port as VM MOH ports.

### **CONDITIONS**

## [759] CLI RINGING

Assigns a specific CID number received from the central office to a specific ring plan destination. And this programming allows the technician to reject the specific CID number and assign its own priority. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest.

It also allows to select the ring tone heard at a phone when called by a specific CID number. There is also a cadence control option to perform a similar function for single line sets. There are eight ring tones available along with a Follow Station(NO) option for the phones. There are 5 cadences and a Follow Station option(NO) for SLT's

The CID Ringing table consists of 500 entries.

Option	Description
CLI	CID number to be received from the central office. Up to 16 digits may be entered.
REJ	CID call reject option. When this sets YES, if a call comes that matched CID number and CLI field then the system will be reject call.
PRI	CID priority option. There are 9 priority levels: priority 1 is the highest and priority 9 is the lowest. When calls into station group come and group members are all busy, the system will assign a priority to the CID number so that calls from a high priority CID number will be placed at the front of the group queue. If this option sets NO, the longest call that placed at the group queue has the highest priority.
R1: XXX, R2: XXX, R3: XXX, R4: XXX, R5: XXX, R6: XXX	Ring plan and destination during each ring plan. The destination can be a station, station group.
TONE	Ring Tone options for a specific CID Number.(NO, 1~8)
	<b>No</b> <b>Calls will ring with the phone users choice of ring frequency.</b>
	1~8    Calls from the programmed CID number will ring phones with this ring frequency.
CAD	Ring Cadence options for a specific CID Number at SLT's(NO, 1~5)
	<b>No</b> <b>Calls will ring with the normal SLT ring cadences.</b>
	1    Calls from the programmed CID number will ring SLT's with the intercom ring cadence.
	2    Calls from the programmed CID number will ring SLT's with the CO ring cadence.
	3    Calls from the programmed CID number will ring SLT's with the DOOR ring cadence.
	4    Calls from the programmed CID number will ring SLT's with the ALARM ring cadence.
5    Calls from the programmed CID number will ring SLT's with the CALLBACK ring cadence.

## [760] ITEM COST TABLE

This MMC provides a means to assign a code to a billable item along with a 10 character name for the item. There are a maximum of 100 entries(00 to 99) in the table with item 00 reserved as the code for room deposits, 01 reserved as the code for phone deposits and items 89 to 99 are reserved for other PMS stream items.

These item codes with the exception of codes 93 to 99 will appear on the guests bill at checkout and will serve to identify what each charge on the bill is for. The room bill, when printed will also show telephone calls with an item designation of TEL and the name field will show the number dialed. In addition to the name up to 8 of the tax codes or rates defined in MMC 761 can be applied to each item.

### PRE DEFINED CODES

No	Code	Description
	Room Deposit	This is the code used for pre pay room deposits.
01	Phone Deposit	This is the code used for pre pay phone deposits
02-88	-	User Assignable Code
89	W/UP SET	A wake up call was set
90	W/UP ANS	A wake up call was answered
91	W/UP N/ANS	A wake up call was not answered
92	W/UP CANCL	A wake up call was cancelled
93	Check In	A guest has checked into a room
94	Check out	A guest has checked out of a room
95	Available	A room has been flagged as Available
96	Occupied	A room has been flagged as Occupied
97	Clean Room	A room has been flagged as needs cleaning
98	Fix Room	A room has been flagged as need maintenance
99	Hold	A room has been flagged as hold

### CONDITIONS

This function can be used only when the hotel function is enabled at 'MMC 813 HOTEL OPERATION'.

MMC 222            EXTENSION TYPE  
MMC 761            TAX RATE SETUP

## [761] TAX RATE SETUP

This MMC allows the technician to set up the 8 tax rates used in MMC 760. Each tax rate may be defined as a fixed value or as a percentage of the item cost. In addition a 10 character name may be used to define the reason for the tax. The Various options are further detailed below.

Option	Description
TAX RATE	This is the number assigned to this tax rate. The tax rates are numbered 1 to 8 to match the rate field in MMC 760 counting from left to right.
TYPE	This is the type of tax and defines if the VALUE is applied as a percentage(%) of the cost of an item or is added as a fixed dollar value(\$) to an item or is applied as a Inclusive VAT percentage(I) of the cost of an item.
VALUE	This is the actual tax rate that will be applied to the item cost.
NAME	This is a 10 character name that will be displayed on the room bill alongside the tax.

### CONDITIONS

This function can be used only when the hotel function is enabled at 'MMC 813 HOTEL OPERATION'.

### INPUT CHARACTERS

Refer to 'INPUT CHARACTERS' in 'MMC [104] STATION NAME'.

### DEFAULT DATA

All rates are %

### ACTION

- 1) Press Transfer button and enter 761.  
Display shows:

```
TAX RATE    ( 1 )
TYPE:% VAL:00.00
```

- 2) Enter valid tax number, e.g., 2 via dial button pad.  
OR  
Press Volume button to make selection and  
press Right Soft button to move cursor.

```
TAX RATE    ( 2 )
TYPE:% VAL:00.00
```

- 3) Dial 0 for '%', 1 for 'C' or 2 for 'I'.  
(Inclusive VAT)  
OR

```
TAX RATE    ( 2 )
TYPE:C VAL:00.00
```

- Press Volume button to make selection and  
press Right Soft button to move cursor.

- 4) Enter in the tax rate or value via dial button pad.  
OR  
Press Volume button to make selection.  
If valid entry, system advances cursor.

```
TAX RATE (2)
TYPE:C VAL:01.25
```

- 5) Enter name using above table and press  
Right Soft button to return to step 2.

```
TAX RATE (2)
NAME:MIA BED
```

- 6) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

## [806] CARD PRE-INSTALL

Allows the preprogramming of a card slot for a specific board type. A board inserted into a system will not be recognized by the system until it is ENABLED using this MMC. Cards installed using MMC 806 will NOT be assigned in the system numbering plan. You must then use MMC 724 to assign the desired directory numbers to extensions, trunks, AA, ports or miscellaneous functions. This MMC also shows which PSU is powering the card selected.

### POWER STATUS

N: 48V Power does not used.

A: 1<sup>st</sup> Power is used.(1<sup>st</sup> Power type = PSU 60)

B: 2<sup>nd</sup> Power is used.(2<sup>nd</sup> Power type = PSU 60)

1: 1<sup>st</sup> Power is used.(1<sup>st</sup> Power type = PSU-B)

2: 2<sup>nd</sup> Power is used.(2<sup>nd</sup> Power type = PSU-B)

[xx]: The maximum port count which 48 V power is supplied.

NOTE

#### When a card is removed and a different type card is inserted

If a card is removed and a different type card is inserted and this MMC is performed, the memory associated with that card(e.g., key programming, etc.) will be erased.

**[809] LEVEL AND GAIN**

Allows the system administrator to set the base level of the TX volume on phones system wide. There are eight(8) levels those are able to be controlled by the Volume button on phone. And maximum controllable levels in the system are ten(10). Phone station users can vary eight levels. So this MMC gives the most flexibility to the system administrator so he can classify any desired eight(8) levels within eleven(11).

No	Option	Description
0	TX LEVEL CONTROL	Adjusts the transmitting sensitivity(Max.: 9) Default values are followed: INDEX: 0 1 2 3 4 5 6 7 LEVEL: 0 1 2 4 3 5 6 7
1	MISC TSW GAIN	Adjusts the level of the internal music source of the MCP card or the external music source of the MISC card.(0~7, higher numbers mean lower levels) Default value is 0.
2	TSW GAIN CONTROL	Adjusts the tone sensitivity(As shown below, there are 8 types of matrix connections of the T-Switch that adjusts the tone sensitivity. Connection between Trunk lines are only applicable when set as 0 in MMC 421.) 0 DGP DLI phone 1 SLT SLI phone 2 ATRK Analog trunk 3 DTRK Digital trunk 4 DECT DECT terminal 5 VOIP MGI port or IP-based phone 6 SVMi SVMi port 7 WLAN WIP port

CAUTION

## [815] CUSTOMER DATABASE COPY

Provides a means to copy the customer database to the SMDB(Smart Media card Data Base). This enables the on board database(SRAM) to be copied to the SMDB and also allows the SMDB database to be copied to the on board database. A daily save can be programmed to automatically save the on board data base to the SMDB. This insures that an up to date database is always available in the case of a catastrophic failure. A daily save time of 00:00 means there is no save performed.

It is recommended to CLEAR the SMDB before the SRAM is copied to it. When the SRAM is copied to the SMDB there is no interruption in service. If the SMDB is copied to the SRAM the system will reset to accept the new data.

Option	Description
SMDB	Smart Media card database
SRAM	MCP2 On-Board database
S:mm/dd/yy hh:mm	Indicates the time the database was saved to the SMDB or the time the SRAM was last saved
DAILY SAVE hh:mm	The time the SRAM will be saved to the SMDB

NOTE

### A Smart Media Card of 16 MB or 32 MB

A Smart Media Card of 16 MB or 32 MB must be installed in order to copy the on board database(SRAM) on to the Smart Media card(SMDB).

## [816] CONFERENCE GAIN

Provides a tool to adjust the gain or loss of stations and trunks in the conference bridge. This is made available to allow for the adjustment of the conference bridge due to permanent unsatisfactory Trunk Line conditions that may inhibit a satisfactory conference bridge. Programming adjustments can be made on individual conference analog trunk members.

Option	Description
MEMBER	This identifies which size of conference the adjustment will be made for. ie. 3, 4 or 5 party conference.
A-TRK	This identifies which analog trunk member that is being addressed.
CNF	This is the gain or loss adjustment in the conference bridge.
SW	This is the gain or loss adjustment in the time division switch.

### When changing the MMC [816]

'MMC [816] CONFERENCE GAIN' is not to correct low volume. To be used with the support of local SAMSUNG Electronics Co. distributor.

## [819] SMART MEDIA FILE CONTROL

This MMC uses display file sizes and clear file on Smart Media card.

Files included in Smart Media are described below:

File Name	Description
STARTUP.INI	If a user designates an MCP or SCP program at MMC 818, related data are saved in this file. This file is initially not included but is created when the above programs are selected at MMC 818.
STARTUP.PRE	When the system is initially started, this program uses the memory of the MCP card to load the MPP program of Smart Media. This program must be included to start the system.
MPPMxxx.PGM MPPLxxx.PGM	Program for MCP2 board. Since the MCP2 program is not installed in the MCP2 board itself, at least one MCP2 program must be included in Smart Media to start the system. Files named MPPMxxxx.PGM represent programs for M-system, and those named MPPLxxxx.PGM represent programs for L-system. Smart Media must include the proper MCP2 program corresponding to the system type(L-system or M-system).
SPPV200.PGM	LCP program. The LCP program is installed in the card itself. The one included in Smart Media is used for S/W version upgrade.
PRIV100.PGM	TEPRI program. The TEPRI program is installed in the card itself. The one included in Smart Media is used for S/W version upgrade.
DATABASE.MPP	This file is created in Smart Media when DB is saved to SMDB by MMC 815. Initially not included, this file is created only when SMDB is created by MMC 815.

## [820] ASSIGN SYSTEM LINK ID

This MMC is used to assign the system link ID for PRI and VoIP networking. Up to 50 link IDs can be entered including SELF ID. In addition each Link ID is also associated with the IP address of the MCP2 card for that system and IP address type.

Option	Description
LINK ID	System ID for networking feature.
SIGNAL G/W	System IP address for VoIP networking
IP TYPE	System IP address type for VoIP networking. SELF system IP address type determines 'SYSTEM IP TYPE' on MMC 830.

### CONDITIONS

'SELF' represents self-node, and must be set to use the networking function. Items other than 'SELF' are used for station numbers and can be omitted.

### DEFAULT DATA

## [824] NETWORK DIAL TRANSLATION

Assigns the digit translation table used for networking. Generally under networking condition, you must dial the node ID and extension number to call the another node extension. It's not convenient. In this MMC, the system provides the easy digit translation of NETWORK LCR DIAL number. The translated digits are works like as LCR plus translated digits. Using this MMC, you only dial the another node extension number and call the another node extension simply. The system provides 96 entry of network dial translation.

## [830] ETHERNET PARAMETERS

This MMC provides a mean to configure the Internet Protocol(IP) addressing of the OfficeServ 500 system MCP2 card. This MMC must be utilized if there are ITP series phones and/or MGI cards used on the system. System only allow to connected by other system(CTI Server, News Server), when CTI SERVER ADDR, NEWS ADDRESS is not set such as 0.0.0.0 or 255.255.255.255.

No	Parameter	Description
00	SYSTEM IP ADDR	Specifies the IP address for the MCP2 card.
01	SYSTEM GATEWAY	Specifies the designated gateway IP address used for contacting IP devices beyond the local network subnet.
02	SYSTEM NET MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range of IP devices(subnet) that are within 'direct reach' of the MCP2(without having to go through the designated network IP gateway).
03	SYSTEM RESET	Prompt to restart system MCP2 when system IP address is changed. This reset is same to FAST RESTART on MMC 811.
04	SYSTEM IP TYPE	Defines which IP addressing relationship is used for communications to and from the MCP2 card. 0 PRIVATE IP ONLY: The system assumes all IP phones and VoIP connections are on the same network. And all IP addresses are private IP address. 1 PRIVATE w PUBLIC: The system knows that there is a mixture of IP phones and VoIP connections on the same network and on remote network(s), thus communicates accordingly based upon the entries in MMC 840(for IP phones), MMC 838(for other VoIP gateways) or MMC 830(for other MCP2). 2 PUBLIC IP ONLY: The system assumes all IP phones and VoIP connections are on the different public network. And all IP addresses are public IP address.
05	SYSTEM PUBLIC IP	The MCP2 will originate communications, to IP phones and VoIP connections outside the local network, using this IP address. Communications to/from this IP will require involvement of the MGI card. The system identifies communications to/from this address as 'public'. This allows devices, on remote networks/subnets, to establish communications with the system, without exposing your LAN. See 'SYSTEM IP TYPE'.
06	SYSTEM MAC ADDR	For your reference, and cannot be changed. The unique hardware (MAC) address of the MCP2 card.
07	PCMMC ADDRESS	When system wants connect to PCMMC, system will be sent to this IP address for connection message. Reserved for future use.
08	SM MANAGER IP	When system wants connect to remote M & A PC, system will be sent to this IP address for connection message. Reserved for future use.

(Continued)

No	Parameter	Description
09	CTI SERVER ADDR	When system wants connect to CTI Server , system will be sent to this IP address for connection message. Reserved for future use.
10	NEWS ADDRESS	When system wants connect to NEWS Server, system will be sent to this IP address for connection message. Reserved for future use.

NOTE

**ETHERNET PARAMETERS**

- The first 3 parameters: SYSTEM IP ADDR, SYSTEM GATEWAY, and SYSTEM NET MASK are stored separate from the main system database, thus will not be defaulted when MMC811 'CLEAR MEMORY' is performed. Furthermore, any changes to these parameters will not be applied until the MCP2 is reset.
- When changing any IP address/value, listed below, three digits must be input for each(octet) field. Example 192.168.1.10 input must be: 192 168 001 010

**CONDITIONS**

- This MMC must be utilized if there are ITP series phones and/or MGI cards used on the system.
- After changing the Ethernet parameter, restart the system to apply the new setting.

**DEFAULT DATA**

SYSTEM IP ADDR: 165.213.97.185  
 SYSTEM GATEWAY: 165.213.97.1  
 SYSTEM NET MASK: 255.255.255.0  
 SYSTEM RESET: NO  
 SYSTEM IP TYPE: PRIVATE IP ONLY  
 SYSTEM PUBLIC IP: 1.1.1.1  
 SYSTEM MAC ADDR: CARD DEPENDANT  
 PCMMC ADDRESS: 0.0.0.0  
 SM MANAGER IP: 0.0.0.0  
 CTI SERVER ADDR: 0.0.0.0  
 NEWS ADDRESS: 0.0.0.0

**ACTION****DISPLAY**

- 1) Press Transfer button and enter 830.  
Display shows the system IP address.
- 2) Press Volume button to make selection and  
Press Right Soft button to move cursor.
- 3) Using the keypad enter three digit IP octet numbers  
IE 192 168 001 010 for 192.168.1.10.  
Cursor will return to step 1 upon completion  
of IP address entry.
- 4) Press Volume button to make selection and  
Press Right Soft button to move cursor.
- 5) Using the keypad enter three digit IP octet numbers.  
IE 192 168 001 001 for 192.168.1.1  
Cursor will return to step 5 upon completion  
of system gateway entry.
- 6) Press Volume button to make selection and  
press Right Soft button to move cursor.
- 7) Press Volume button to make selection and  
press Right Soft button to store and move cursor.
- 8) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

## [831] MGI PARAMETERS

This MMC provides a mean to configure the Internet Protocol(IP) addressing of the MGI card(s). This MMC must be utilized MGI card(s) used on the system.

No	Parameter	Description
0	IP ADDRESS	Specifies the IP address for the MGI card.
1	GATEWAY	Specifies the designated IP gateway address used for contacting IP devices beyond the local subnet.
2	SUB MASK	Specifies the IP subnet mask. This parameter is used by the system to calculate the range if IP devices(subnet) that are within 'direct reach' of the MGI(without having to go through the designated network IP gateway).
3	IP TYPE	Defines which IP addressing relationship is used for communications to and from the MGI card. 0 PRIVATE IP ONLY 1 PRIVATE w PUBLIC 2 PUBLIC IP ONLY
4	PUBLIC IP	The MGI will originate communications, to IP phones and VoIP connections outside the local network, using this IP address. If this IP address sets 0.0.0.0, 255.255.255.255 or default value then this MGI card uses private IP only. See System IP Type on MMC 830.
5	VERSION	No entry required. Used to indicate revision of MGI3 S/W.
6	MAC ADDR	For your reference, and cannot be changed. The unique hardware(MAC) address of the MGI card.
7	CARD RESET	Prompt to restart MGI card when IP address is changed. This use for MGI 1 and 2 only, MGI3 is self restart automatically.

NOTE

### MGI PARAMETERS

- The first 3 parameters: IP ADDRESS, GATEWAY, and SUB MASK-changes to these parameters will not be applied until the MGI is reset.
- When changing any IP address/value, listed below, three digits must be input for each(octet) field. Example 192.168.1.10 input must be: 192 168 001 010

## CONDITIONS

This MMC cannot be accessed unless there is an MGI card installed in the system.

## DEFAULT DATA

IP ADDRESS: 1.1.1.1  
GATEWAY: 1.1.1.1  
SUB MASK: 255.255.255.0  
IP TYPE: PRIVATE IP ONLY  
PUBLIC IP: 1.1.1.1  
VERSION: V4  
CARD RESET: NO

## ACTION

- 1) Press Transfer button and enter 831.  
Display shows the first MGI card.
- 2) Enter MGI number.  
OR  
Press Volume button to make selection and press Right Soft button to move cursor.
- 3) Enter MGI parameter number.  
OR  
Press Volume button to make selection and press Right Soft button to move cursor.
- 4) Enter MGI parameter.  
OR  
Press Right Soft button to move cursor.
- 5) Press Transfer button and enter to exit.  
OR  
Press Speaker button to advance next MMC.

## [832] VOIP ACCESS CODE

Provides a means to apply the Internet Protocol(IP) address to the VoIP gateway.

This MMC also assigns the number of channels that can be used for IP faxes.

**TABLE(00~62):** Outbound or Inbound table use for specific access codes. Usually when the MCP2 card is used as a VoIP gateway the Outbound table is used. The Inbound table is used to determine the number of digits to receive before processing the call. Each table has 63 entries(00~62).

No	Option	Description
0	ACCESS DGT	This is the access code that is used once the VoIP gateway is accessed; this directs a call based on the routing tables used. An access code table then references an access code and correlates an IP address to the access code for routing. A maximum of 8 digits are available.
1	DGT LENGTH	This field requests the number of digits that are expected to be received to make up the whole access code.
2	DEL.LENGTH	This is the number of digits to delete after receiving the access code. If no digits are deleted the access code will be sent as part of the call to the destination to continue routing at the far end destination.
3	INSERT DGT	This is the digit(s) to insert for routing at the destination. This can be used when different numbering plans exist or if a dial 9 access is needed to be inserted in the dialed digits.
4	IP TABLE 1	This is the first table referenced for routing the access code to an IP address. The system has 64 IP tables(00~63) with 16 entries(00~15) in each table. See MMC 833.
5	IP START	This entry indicates where in a table to start looking for an IP code to associate with the access code. This can be used to manage where to start looking for an IP address in high traffic VoIP gateway applications. Example: If IP address routing to the desired destination is known to be in the last 7 entries of a table the IP START location would be 8. IP address searching would start at entry 8.
6	GK USE	This parameter determines whether a H.323 Gatekeeper will be utilized to establish this connection.

### CONDITIONS

NONE

## DEFAULT DATA

ACCESS DGT: 00~09(digits 0~9),10~62 NONE

## [833] VoIP IP TABLE

This MMC provides the IP addresses in tables pointed to by the VoIP code entry(MMC832). There are 63 tables with up to 16 entries each. The destination IP address is required to route dialed digits based on the access code and digits dialed. The IP entry field is divided into 4 sections allowing modification of separate IP address fields.

NOTE

### When changing IP

When changing any IP address/value, listed below, three digits must be input for each(octet) field. Example 192.168.1.10 input must be: 192 168 001 010

**[834] H.323 OPTIONS**

This MMC provides various VoIP support options. The options set in this MMC are set system-wide.

No	Parameter	Description	Default
00	GATEWAY CALL ID	This a up to 12 digits numeric entry that identifies this system.	1234
01	H.323 FAST SETUP	Enables or disables the H.323 Fast Start call setup method.	ENABLE
02	CALLER ID TYPE	This option controls the calling party identification type. There are 3 possible selections : 0 GWID: Which shows the gateway call ID. 1 ANI: Which shows the calling station number 2 IP: Which shows the calling H.323 gateway IP address.	ANI
06	TUNNELING	Enables or disables the need for additional channels using H.245 signaling. Tunneling allows use of the H.245 signal channel with the Q.931 channel.	ENABLE
07	DEFAULT DIL NO	This allows programming of the default direct in line number when digits are missing, or incorrect on an inbound call.	500
11	CODEC AUTO NEGOTIATION	Enables or disables Auto CODEC Negotiation when the MGI is used as a H.323 gateway.	ON
14	SIGNAL PORT	Indicate the port number for H.323 signaling and sets a range of numbers allowed by firewall equipment. The common and default IP path or port used is 10000.	-
17	SEND CLIP TABLE	Refers to SEND CLI NUMBER(MMC323), which provides calling party identification when using the MGI as a H.323 gateway. This provides station ID of the calling station. A single digit value corresponding with the desired table in MMC323 should be entered here. This is only used when MMC405 value is null.	1
18	INCOMING MODE	This option selects how incoming calls are routed when the MGI is used as a H.323 gateway. 0 FOLLOW TRUNK RING: Follows MMC406 1 FOLLOW DID TRANS: Follows MMC714 2 FOLLOW INCOM DGT: Follows MMC724	FOLLOW DID TRANS
19	ALLOW GW CHECK	When using a gatekeeper, this permits the H.323 gateway to check for gatekeeper presence.	DISABLE
20	CLIR WITH NUMBER	When this option is set to ON, the CLIP number is sent to the network even though the CLIP restriction flag is set.	DISABLE

## [835] MGI DSP OPTIONS

This MMC provides various MGI DSP options. The options set in this MMC are MGI-type specific.

**MGI card types are followed:**

No	Parameter	Description
0	MGI3	Supports maximum 16 channels G.711, G.723.1, G.729, G.729A or T.38. Default 8 channels and 8 channels on option board.
1	MGI2	Supports 16 channels G.711 or G.729.A
2	MGI1	Supports 16 channels G.711 only

**MGI3 parameters are followed:**

No	Parameter	Description	Default
00	CODEC-FRAME	Selects which audio CODEC compression will be used and the transmission interval time of VoIP packets generated by the MGI card. MGI3 card supports G.729A(8 K), G.729(8 K), G.711(64 K), and G.723.1(5.3~6.4K).	G.729A - 40 ms
01	ECHO CANCEL	Enables or disables echo cancellation. This function removes echo that is generated by voice reflection and packet delay.	ENABLE
02	SILENCE SUP	This parameter determines whether silence suppression is used This prevents transmission during the silence period of a call, and conserves bandwidth when enabled.	DISABLE
03	IN FILTER	This option select input filtering of the DSP. This should always be set as ENABLE.	ENABLE
04	OUT FILTER	This option select output filtering of the DSP. This should always be set as ENABLE.	ENABLE
05	INPUT GAIN	PCM input gain value of DSP. The range is- 31 dB~32 dB(0~63). This set the quality of PCM voice from the VoIP DSP to the site. Default is 32(0 dB).	31 (0 dB)
06	VOICE VOL	This value selects the voice volume. The range is- 31 dB~31 dB(0~63).	31 (0 dB)
08	JITTER OPT	This is a scale value that introduces a intentional buffer(delay) of the transmission of VoIP packets generated by the MGI card. This value determines whether the focus is on packet loss or packet delay. The range is 00~12.	4

(Continued)

No	Parameter	Description	Default
09	MIN JITTER	Decides the minimum time to consider delay for jitter adjustment. The range is 010~300 ms	30 ms
10	MAX JITTER	Decides the maximum time to consider delay for jitter adjustment. The range is 010-300 ms.	150 ms
11	FAX ECM	This option selects retry of Fax-over-IP, in the case that errors are detected.	ENABLE
12	MAX FAX CNT	This is maximum number of channels that can be simultaneously utilized for Fax-over-IP. The range is 00~16.	2
13	DTMF TYPE	There are two types of DTMF transmission: INBAND, which is industry standard(H.245) type DTMF transport, and OUTBAND which is a Samsung proprietary method.	OUTBAND
14	TOS FIELD	An eight-bit binary value that will be utilized by external routers, switches, etc(that optionally support TOS-bit prioritization)-to identify the transport-priority value of data packets generated by the MGI card. This value can be left at default value(00000) if your network infrastructure does not support this method of bandwidth management.	all bits 0
15	FAX RETRY	This option selects retry count of Fax-over-IP, in the case that errors are detected. The range is 0~4 and 0 means no retry.	0
16	RTP CHK TM	This options selects the interval time of sending RTCP.	5 sec

**MGI2 and MGI1 parameters are followed:**

No	Parameter	Description	Default
0	CODEC FRAME	Selects which audio CODEC compression will be used and the transmission interval time of VoIP packets generated by the MGI card. MGI2 supports G.729A(8 K) and G.711(64 K). MGI1 supports G.711 only.	G.729A(MGI2)-40 ms
1	ECHO CANCEL	This function removes echo that is generated by voice reflection and packet delay. This sets ENABLE only, cannot be changed.	ENABLE
2	SILENCE SUP	This parameter determines whether silence suppression is used. This prevents transmission during the silence period of a call, and conserves bandwidth when enabled.	DISABLE
4	MIN JITTER	Decides the minimum time to consider delay for jitter adjustment. The range is 020~300 ms	30
5	MAX JITTER	Decides the maximum time to consider delay for jitter adjustment. The range is 020-300 ms.	100
6	DTMF TYPE	There are two types of DTMF transmission: INBAND, which is industry standard(H.245) type DTMF transport. This sets INBAND only, cannot be changed.	INBAND
7	TOS FIELD	An eight-bit binary value that will be utilized by external routers, switches, etc(that optionally support TOS-bit prioritization)-to identify the transport-priority value of data packets generated by the MGI card. This value can be left at default value(00000) if your network infrastructure does not support this method of bandwidth management.	all bits 0

## [836] H.323 GK OPTIONS

Provides a means to set the H.323 gatekeeper parameters for an optional external industry-standard H.323 network gatekeeper, using Registration, Admissions, and Status signaling (RAS). The settings are system wide.

NOTE

### When changing IP

When changing any IP address/value, listed below, three digits must be input for each(octet) field. Example 192.168.1.10 input must be: 192 168 001 010

No	Parameter	Description	Default
00	GK CONNECTION	This enables or disables the H.323 call to connect to a gatekeeper.	DISABLE
01	GK ROUTING	This enables or disables routing of calls through a gatekeeper.	DISABLE
02	GK IP ADDRESS	This is gatekeeper's IP address.	0.0.0.0
03	GK NAME	This is alphanumeric name identifier of the gatekeeper. An entry of 16 characters.	'Gatekeeper'
04	ALTER GK IP ADDR	This provide for an alternate gatekeeper address.	0.0.0.0
05	H.323 GATEWAY ID	This is the H.323 identifier used by the MGI when registering with the gatekeeper. This can be up to 32 characters.	'OfficeServ'
06	E.164 GATEWAY NO	This is the E.164 identifier used by the H.323 trunk when registering with the gatekeeper. This can be up to 16 digits in length.	1234
07	GK KEEP ALIVE	This is the timer that the MGI uses to acknowledge the presence of the gatekeeper. The range is 000~999 seconds.	0 sec
08	GK DOWN ROUTE	This provides an alternate route in case the primary gatekeeper is down. Selections are PSTN or ALTER GK.	PSTN
09	GK RAS TYPE	Select if AUTO or MANUAL, depending on your gatekeeper's capabilities.	AUTO
11	URQ REASON MODE	Select ON or OFF for usage of Un-register Request RAS(URQ) messages.	ON
12	RRQ FAIL TIME	Programs the time frame to re-send Registration Request RAS(RRQ) messages to a gatekeeper. The range is 1~99.	30 sec
13	GRQ SEND	Select ON or OFF for usage of Gatekeeper RAS Request(GRQ) messages.	OFF

(Continued)

No	Parameter	Description	Default
14	USE MULTI E.164	When this option is set to ENABLE, the E.164 identifier can be assigned up to 32 lists.	DISABLE
15	E.164 LISTS (01)	This is the E.164 identifier used by the H.323 trunk when registering with the gatekeeper. There is a maximum 32 E.164 identifier lists with a digit string length of 16 digits.	NONE
16	GK REGISTERED	Display the status of registration to the GateKeeper.	NO

## [837] SIP OPTIONS

This MMC permits the adjustments of optional Session Initiation Protocol(SIP) trunk parameters. The MCP2 supports SIP and H.323 on a per call-per-port basis. The settings are system-wide.

NOTE

### When changing IP

When changing any IP address/value, listed below, three digits must be input for each(octet) field. Example 192.168.1)10 input must be: 192 168 001 010

No	Parameter	Description	Default
00	GATEWAY CALL ID	This a up to 12 digits numeric entry that identifies this system.	'1234'
01	CALLER ID TYPE	This option controls the calling party identification type. There are 3 possible selections: 0 GWID: Which shows the gateway call ID. 1 ANI: Which shows the calling station number(Default) 2 IP: Which shows the calling H.323 gateway IP address.	ANI
05	DEFAULT DIL NO	This allows programming of the default direct in line number when digits are missing, or incorrect on an inbound call.	500
06	UDP PORT: TRUNK	Sets the UDP port used on a SIP trunk call.	5060
07	UDP PORT: PHONE	Sets the UDP port used on a SIP phone call.	5070
09	RE-TRANS. T1 TIME	The initial re-transmission time if no answer based on the RFC2543 specification. The range is 0~9900 ms.	500 ms
10	RE-TRANS. T2 TIME	The maximum re-transmission time if no answer based on the RFC2543 specification. The range is 0~9900 ms.	4000 ms
11	RE-TRANS. T4 TIME	The time the User Agent Server waits after receiving the ACK message. Based on the RFC2543 specification. The range is 0~9900 ms.	5000 ms
12	GENERAL RING TM	The server shall retransmit the response during this amount of time until the requested retransmission is received. For example, the wait time after sending 200 OK for INFO. The range is 0~99900 ms.	5000 ms
13	INVITE LING TM	After the client sends ACK for the INVITE Final Response, the client cannot confirm if the server received the ACK message. The client waits for this amount of time after sending ACK for the Final Response. The range is 0~99900 ms.	5000 ms

(Continued)

No	Parameter	Description	Default
14	PROVISIONAL TIME	After receiving the Provision Response, the User Agent shall wait for this amount of time until Timeout ends. The range is 0~999900 ms.	180000 ms
15	INV.NO RESP TIME	Before sending Cancel for the Invite Request, the User Agent shall wait for this amount of time. The range is 0~99900 ms.	5000 ms
16	GEN.NO RESP TIME	Before sending Cancel for General Request, the User Agent shall wait for this amount of time. The range is 0~99900 ms.	5000 ms
17	REQ.RETRY TIME	After sending General Request, the User Agent shall wait for the Final Response for this amount of time. The range is 0~99900 ms.	5000 ms
18	SIP SERVER ENABLE	Sets ENABLE or DISABLE to use an optional external industry-standard SIP Server.	DISABLE
20	SIP SERVER IP	Sets SIP server IP address.	0.0.0.0.
28	SIP SERVER PORT	Sets the port to use on the SIP Server.	5060
29	SIGNAL PORT	Indicate the port number for SIP signaling and sets a range of numbers allowed by firewall equipment. The common and default IP path or port used is 10000.	10000
32	SEND CLIP TABLE	Refers to SEND CLI NUMBER(MMC323), which provides calling party identification when using the MGI as a SIP gateway. This provides station ID of the calling station. A single digit value corresponding with the desired table in MMC323 should be entered here. This is only used when MMC405 value is null.	1
33	INCOMING MODE	This option selects how incoming calls are routed when the MGI is used as a SIP gateway. 0 FOLLOW TRUNK RING: Follows MMC406 1 FOLLOW DID TRANS: Follows MMC714(default) 2 FOLLOW INCOM DGT: Follows MMC724	FOLLOW DID TRANS
34	ALLOW GW CHECK	When using a gatekeeper, this permits the SIP gateway to check for gatekeeper presence.	DISABLE
37	CLIR WITH NUMBER	When this option is set to ON, the CLIP number is sent to the network even though the CLIP restriction flag is set.	DISABLE
38	SIP REGISTERED	Display the status of registration to the SIP Server.	NO

## [840] IP PHONE INFORMATION

This MMC provides a means to register the IP phones with the OfficeServ 500 system. During registration, the IP and MAC addresses are also registered. The User ID and Password must match the table entry in this MMC for the IP phone to be registered. The system made default phone numbers are 3201~3299 and made default User ID's match the default station numbers(3201~3299). The system default password is 1234. IP phones must be individually programmed with User ID and Password to register with the system.

No	Option	Description	Default
00	USER ID	This is the ID the IP phone must match to register with the OfficeServ 500 system. This entry can be alphanumeric.	first 99 IP phones are '3201'~'3299', others are EMPTY
01	USER PSWD	This is the Password the IP phone must also have to register with the OfficeServ 500 system. This entry can be alphanumeric.	'1234'
02	IP ADDR	This is the IP address of the IP phone once registered with the system. This is read only data.	0.0.0.0.
03	MAC ADDR	This is MAC address of the IP phone once registered with the system. This is read only data.	FFFFFFFFFFFF
04	SIG PORT	This is the IP UDP port of the IP phone once registered with the system. This is read only data. This information will be needed when traversing NAT routers, firewalls, etc.	6000
05	VOICE PORT	This is the IP RTP port of the IP phone once registered with the system. This is read only data. This information will be needed when traversing NAT routers, firewalls, etc.	9000
06	IP TYPE	This is the type of IP network used: PRIVATE or PUBLIC or PUBLIC/FIREWALL.	PRIVATE
07	DSP TYPE	This selects which CODEC this phone's DSP will use. G.729A(low bandwidth) or G.711(high bandwidth). This data uses IP phone to IP phone connection only, others case are follow MGI CODEC type.	G.729A
08	PHONE TYPE	This the type of IP phone used. SAMSUNG or SIP(future). Please should be use SAMSUNG.	-
09	REGIST CLR	This is used to clear the registration of a particular IP phone. This is similar to phone plug out and plug in, and the useful for maintenance. Because technician will be re-registered IP phone without network cable find out first.	-

(Continued)

No	Option	Description	Default
10	FRAME COUNT	This value determines the transmission interval time of VoIP packets generated by the IP phone. This data uses case of MMC 841 ITP DSP PARA DOWN = PHONE DATA only. The range is 10~40 ms.	10 ms
11	JITTER BUF	Decides the minimum time to consider delay for jitter adjustment. This data uses case of MMC 841 ITP DSP PARA DOWN = PHONE DATA only. The range is 10~90 ms.	20 ms
12	TOS FIELD	An eight-bit binary value that will be utilized by external routers, switches, etc(that optionally support TOS-bit prioritization)-to identify the transport-priority value of data packets generated by the IP phone. This value can be left at default value(00000) if your network infrastructure does not support this method of bandwidth management. This data uses case of MMC 841 ITP DSP PARA DOWN = PHONE DATA only.	all bits 0
13	SW VERSION	Display IP phone software version. This read only data.	DISCONNECT
14	SW UPGRADE	This is used IP phone software upgrade request command. When this selects YES and press Right Soft button, the system requests to IP phone software upgrade with TFTP IP address.	DISCONNECT
15	TIME ZONE	Decides time difference of IP Phone and the system. This is for IP Phone which is installed in the different time area of the system.	00:00
16	PUB TO PUB	When this option is set to 'USE MGI', MGI can be allocated between Remote ITPs in same private zone.	NOT USE MGI
17	SIG TYPE	This option can change UDP/TCP signal type of ITPs. (ITP V3.xx only supports TCP signal type. When ITP V2.xx attempt to connection the TCP signal type will be changed to UDP automatically even though user set the TCP signal type. )	UDP
18	PRIVATE IP	This is the Private IP address of the IP phone once registered with the system. This is read only data.	0.0.0.0

## [844] IP STATION TYPE

This MMC is used to assign the IP station type(DESKTOP PHONE or MOBILE PHONE). In default, the first half of IP station is assigned to DESKTOP PHONE and the last half is assigned to MOBILE PHONE. To install the certain type more than the default assigned count, user must to change the IP station type in this MMC because the maximum capacity of IP Phone is limited. To install ITP-5012L, ITP-5014D or ITP-5021D must be set to DESKTOP Phone. And to install WIP-5000M must be set to MOBILE PHONE.

## [845] WLAN PARAMETER

This MMC modifies the WLAN parameter.

Set the network configuration with the WLAN parameters, which are the SYSTEM ID, the System KEY, and the WBS24 and SIP related with WLAN call.

The system KEY is used internally to distinguish between systems when registering a terminal. The default value is '00000', but only when this value is modified to another value, an electric power will be supplied to the WBS24, thus enabling the use of the WLAN terminal, In addition, the System KEY serves as an identification ID when the WLAN terminal connects to the WBS24.

The default value of the SYSTEM ID, 'WBS24', must be modified to another value in order to use a multiple system in one area. The DNS setting for WLAN is additionally described in this menu.

Set the network configuration for WBS24 by setting the IP assignment, Netmask, and Gateway. These settings should be compatible with the Intranet since the network configuration setting is essential for data service. In addition, the RF frequency for WBS24 should be selected. Currently up to 14 frequencies may be selected.

Session Initiation Protocol(SIP) variables used for the WBS24(Basic) can be defined.

### WLAN PARAMETER

No	Parameter	Description	Default
00	SYSTEM ID	ID used for distinguishing systems in wireless environment. Different IDs must be assigned to different systems.	WBS24
01	SYSTEM KEY	Key used for registering terminals. Different values must be assigned to each system.	00000
02	1 <sup>st</sup> DNS IP	First Domain Name Server(DNS) IP address	0.0.0.0
03	2 <sup>nd</sup> DNS IP	Second Domain Name Server(DNS) IP address	0.0.0.0
04	2 <sup>nd</sup> WBS IP	IP addresses of all WBSs of system used by wireless terminal. Different IPs must be assigned to each system.	168.208.144. 10
05	CODEC LIST	It shows CODEC that can be used for VoIP calls between WBS24 and terminal.(G.729)	CODEC 1: G.729
06	RF CHANNEL	Set a RF CHANNEL value that can be used by WBS.	USE CH 1: 01 USE CH 2: 06 USE CH 3: 11 USE CH 4: 00 USE CH 5: 00 USE CH 6: 00

(Continued)

No	Parameter	Description	Default
07	VERSION	WLAN module version.	-
08	TFTP SERVR	WBS UPGRADE Server IP.	0.0.0.0
09	TFTP FILE	WBS UPGRADE file name.	WBS00000.TFP
18	WBS TX PWR	TX POWER of entire WBSs.	DEFAULT
19	CLR WBSREG	Initializes registration data of all WBSs.	NO

### WBS PARAMETER

There are two types of WBSs, the COMBO AP and BASIC AP. A system cannot use both types of WBSs at the same time. The AP type to be used can be set at Program 849. Depending on the selected AP type, this program displays COMBO AP(CWBS), and BASIC AP(BWBS).

- When using COMBO AP  
WBS24 COMBO is connected to a WLI card. Up to 3 WLI cards can be connected to an L-system, and a single WLI card can be connected to a M-system.(A single WLI card can connect up to 8 WBS24 COMBOs.)
- When using BASIC AP  
WBS24 BASIC is connected to the system through the network and requires an MGI port to provide tone and call path connection.

No	Parameter	Description	Default
0	IP ADDRESS	WBS24 IP address for Ethernet.	0.0.0.0
1	GATEWAY	Gateway address of the WBS24 Network.	0.0.0.0
2	NET MASK	Netmask of the WBS24 Network.	255.255.255.0
3	MAC ADDR	MAC address of WBS24 received to the system when WBS24 is connected.	FFFF FFFF FFFF
4	VERSION	WBS24 Software version.	-
5	STATUS	Alive operation status.	OFF
6	USE RF CH.	RF channel No. used by each WBS24 .	1, 6, or 11
7	TX POWER	TX POWER of each WBS.	DEFAULT
8	LANGUAGE	According to Language, different date/day is serviced(not yet implemented).	ENGLISH
9	TIMEZONE	According to time zone, different time zone is serviced(not yet implemented).	00:00
10	PARA CLR	Initializes WBS registration data.	NO

**SIP PARAMETER**

No	Parameter	Description
0	RE-TRANS T1	When using an unreliable transmission protocol such as UDP, retransmission is required when no reply is received. RE-TRANS. T1 TIME is the initial retransmission interval defined in RFC2543.
1	RE-TRANS T2	Maximum retransmission interval defined in RFC 2543
2	RE-TRANS T4	RFC 2543 defines this parameter for various purposes. For example, this parameter can be used as the time waited by User Agent Server(USA) after receiving ACK message in an unreliable transmission protocol.
3	GEN RING TM	When using an unreliable transmission protocol, the server cannot be sure if the client has received the last reply. Thus, the server must retransmit the reply for as long as this time until it receives the requested retransmission. For example, this parameter can be used as the waiting time after sending 200 OK for INFO.
4	INV RING TM	When using an unreliable transmission protocol, the client cannot verify if the server has received the ACK returned to the server for the INVITE Final Response. The client waits for as long as this time after sending the ACK for the Final Response.
5	GEN NO RESP	Waiting time until canceling SIP related Request.
6	INV NO RESP	Waiting time until canceling SIP INVITE Request.
7	REQ RETRY	Waiting time until receiving final response for SIP related Request.
8	PROVISIONAL	On receiving Provision Response, the User Agent must wait for as long as this time until Timeout.

Displays the WBS24 STATUS.	CWBS1 : STATUS OFF
Register the WBS24 RF CHANNEL(The WBS RF channel must be selected among the pre-assigned RF channels in WLAN RF CHANNELS item).	CWBS1 : RF CHAN USE CH 1:01
Register the WBS24 TX POWER. (Default: LEVEL 1~4)	CWBS1 : TX POWER DEFAULT
Used to clear the WBS parameter.	CWBS1 : PARA CLR ARE YOU SURE?NO
6) Set the items below at the menu.	
Register the RE-TRANS T1. The initial re-transmission time if no answer based on the RFC2543 specification. The range is 0-9900 ms. (Default: 500 ms)	SIP : RE-TRANS T1 000500MS
Register the RE-TRANS T2. The maximum re-transmission time if no answer based on the RFC2543 specification. The range is 0-9900 ms. (Default: 4000 ms)	SIP : RE-TRANS T2 004000MS
Register the RE-TRANS T4. The time the User Agent Server waits after receiving the ACK message. Based on the RFC2543 specification. The range is 0-9900 ms. (Default: 5000 ms)	SIP : RE-TRANS T4 005000MS
Register the GEN LING TM. The server shall retransmit the response during this amount of time until the requested retransmission is received. For example, the wait time after sending 200 OK for INFO. The range is 0-99900 ms. (Default: 6000 ms)	SIP : GEN LING TM 006000MS

Register the INV RING TM. After the client sends ACK for the INVITE Final Response, the client cannot confirm if the server received the ACK message. The client waits for this amount of time after sending ACK for the Final Response. The range is 0-99900 ms. (Default: 1000 ms)

```
SIP : INV RING TM
001000MS
```

Register the GEN NO RESP Before sending Cancel for General Request, the User Agent shall wait for this amount of time. The range is 0-99900 ms. (Default: 5000 ms)

```
SIP : GEN NO RESP
005000MS
```

Register the INV NO RESP Before sending Cancel for the Invite Request, the User Agent shall wait for this amount of time. The range is 0-99900 ms. (Default: 5000 ms)

```
SIP : INV NO RESP
006000MS
```

Register the REQ RETRY After sending General Request, the User Agent shall wait for the Final Response for this amount of time. The range is 0-99900 ms. Default is 5000 ms

```
SIP : REQ RETRY
005000MS
```

Register the PROVISIONAL After receiving the Provision Response, the User Agent shall wait for this amount of time until Timeout ends. The range is 0-999900 ms. (Default: 180000 ms)

```
SIP : PROVISIONAL
180000MS
```

## [851] ALARM REPORTING

This MMC is used to view, store, print or clear system alarms. There are two levels of faults displayed via alarm code, major alarms and minor alarms. Major alarms codes are usually service affecting and require a certified technician to determine the fault. A minor alarm indicates a fault that may or may not be service affecting and usually does not seriously degrade the systems operating capabilities. The alarm buffer will hold up to 100 alarms on a first in-first out(FIFO) basis. Alarms will provide a date and time stamp based on the system time. If applicable the hardware cabinet, port, and/or slot will be displayed. If an ALARM SIO port is programmed(MMC 804) alarm information can be printed on demand and also prints as alarm information is provided.

ALARM REPORTING OPTIONS(Select one of the options)

No	Option	Description
0	VIEW ALARM	View alarm buffer.
1	OVERFLOW CONTROL	Determines buffer control when buffer is full. 0 OVERWRITTEN: When buffer is full, the oldest entry in buffer overwritten.(Default) 1 STOP RECORDING: When buffer is full, stop recording alarms.
3	CLEAR ALARM BUF	Clears alarm buffer.
4	PRINT ALARM BUF	Prints contents of alarm buffer to the assigned alarm IO port.

NOTE

MMC 852            SYSTEM ALARM ASSIGNMENTS

## [852] SYSTEM ALARM ASSIGNMENTS

This MMC allows the assignment of system alarms to ring and display the alarms on stations that have the Alarm Key assigned. The System Alarm Key is programmed in Station Key Assignments(MMC 722). System Alarm key programming is tenant wide(tenant 1 and 2). Alarms not programmed to report to the System Alarm key will still be retained in the maintenance alarm buffer for Alarm Reporting(MMC 851). The alarm buffer will hold up to 100 alarms on a First In-First Out(FIFO) basis. Pressing the System Alarm key will silence the audible alarm until another alarm is generated by the system. Alarm conditions that have multiple causes e.g., PRI errors and synchronization loss will print all associated alarm information if an SIO port is programmed as an ALARM port. The specific fault alarm data can be displayed via MMC 851 System Alarm Reporting.

NOTE

### Alarm Notification

Alarm Notification Off/On(0/1) determines if the alarm provides a visual and audible notification to the System Alarm key station(s). Pressing the System Alarm key and the release key will silence the audible alarm only at the station that pressed the System Alarm key and the release key. See alarm displays table for assignments.

Alarm Code Definition:

No	Code	Alarm Name	Definition
-	MJA--	MCP2 Error	<b>System Fault</b>
01	MJA01	POR Restart	MCP2 restart process has been executed via power on restart(POR).
02	MJA02	Soft Restart	MCP2 restart process has been executed via button reset.
03	MJA03	MEM Reset	The system RAM has been cleared via manual programming (PCMMC or KMMC) resulting in a system reset.
04	MJA04	MCP Reset	The MCP2 has S/W exception error. Alarm data = Reason - BUS ERR: Restart Bus Error - ADDR.ERR: Restart Address Error - ILLEGAL: Restart Illegal opcode - ZERO DIVID: Restart Zero divide - PRIVILEGE: Restart Privilege Violation - ENDL LOOP: Restart Endless Loop
05	MJA05	LCP Reset	The SCP2 or LCP2 has reset Alarm data = Cabinet(1, 2 or 3)
06	MJA06	PCM Switching	A fault has occurred in the Switching Control Alarm data = MCP BASE, ESM: 1, ESM: 2 or ESM: 3

(Continued)

No	Code	Alarm Name	Definition
-	<b>MJB--</b>	<b>LCP/TASK Error</b>	<b>LCP or TASK Fault</b>
10	MJB01	HDLC Com Error	Communications to LCP lost or faulty.
11	MJB02	Memory Alarm 1	A RAM diagnostic check error has occurred in the MCP2.
12	MJB03	Memory Alarm 2	A RAM diagnostic check error has occurred in the cabinet 1 SCP2.
13	MJB04	Memory Alarm 3	A RAM diagnostic check error has occurred in the cabinet 2 LCP2.
14	MJB05	Memory Alarm 4	A RAM diagnostic check error has occurred in the cabinet 3 LCP2.
15	MJB06	IPC MSGQ Over	IPC TX queue full error has occurred in the MCP2. Alarm data = IPC Queue type (MCP-LAN, MCP-SCP, MCP-LCP1, MCP-LCP2)
16	MJB07	Task MSGQ Over	Task MSG queue full error has occurred in the MCP2. Alarm data = Error Task
-	<b>MJC--</b>	<b>DSP Error</b>	<b>System DSP Fault</b>
17	MJC01	DTMF Fault	An abnormal interrupt has occurred in the system DTMF resources. Alarm data = DTMF Receiver DSP position
18	MJC02	Tone Fault	An abnormal interrupt has occurred in the system tone resources. Alarm data = TONE Receiver DSP position.
26	MJC10	AA-DTMF Fault	An abnormal fault reported in one of the AA card DTMF resources. Alarm data = Cabinet, Slot, Port(Cx-Syy-Pzz)
27	MJC11	AA-MFR Rec	An abnormal fault reported in one of the AA card DTMF resources has recovered. Alarm data = Cabinet, Slot, Port(Cx-Syy-Pzz)
28	MJC12	E911 Restart	The E911 card has restarted. Alarm data = Cabinet, Slot(Cx-Syy)
29	MJC13	E911 Block	The E911 card has blocked because the system detects the card does not work correctly. Alarm data = Cabinet, Slot(Cx-Syy)
32	MJC16	WLI Restart	The WLI card has restarted. Alarm data = Cabinet, Slot(Cx-Syy)
33	MJC17	WLI Block	The WLI card has blocked because the system detects the card does not work correctly. Alarm data = Cabinet, Slot(Cx-Syy)

(Continued)

No	Code	Alarm Name	Definition
-	MJD--	DTRK Error	ISDN or E1 card Fault
34	MJD01	Sync Failure	Clocking on TEPRI cards has become asynchronous.
35	MJD02	Sync Recovery	Clocking on TEPRI cards has become synchronous.
36	MJD03	Red Alarm	Locally detected loss of PCM carrier on TEPRI card for more than 250 ms. Alarm Data = Cabinet, Slot(Cx-Syy)
37	MJD04	Red Alarm Rec	PCM carrier detected locally on TEPRI cards. Alarm Data = Cabinet, Slot(Cx-Syy)
38	MJD05	Yellow Alarm	Remotely detected failure transmitted in frame on TEPRI card. Alarm Data = Cabinet, Slot(Cx-Syy)
39	MJD06	Yellow Alarm Rec	Remotely detected failure restored transmitted on TEPRI card. Alarm Data = Cabinet, Slot(Cx-Syy)
40	MJD07	Blue Alarm	All one's being transmitted on facility on TEPRI card. Alarm Data = Cabinet, Slot(Cx-Syy)
41	MJD08	Blue Alarm Rec	A blue alarm condition has been cleared. Alarm Data = Cabinet, Slot(Cx-Syy)
42	MJD09	Bit Error Alarm	Alarm is activated when the when error rate exceeds $1 \times 10^{-6}$ errors. Note: $1 \times 10^{-6}$ is threshold for minor alarm, $1 \times 10^{-3}$ is threshold for major alarm errors on E1,PRI or BRI. Alarm Data = Cabinet, Slot(Cx-Syy)
43	MJD10	NTWRK Event	An Implausible event has occurred on the PRI or BRI Network digital line. Protocols do not match or subscriber ID mismatch. Alarm Data = Cabinet, Slot Cx-Syy)
44	MJD11	SPID Init Error	The BRI received an error from the network Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
45	MJD12	SPID Init Rec	The BRI has recovered from an error on the network Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
46	MJD13	LPBK Error	Internal on demand loopback failed. Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
47	MJD14	LPBK Recovery	Internal on demand loopback test passed. Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
48	MJD15	BRI DL Unavail	A BRI data link is out of service. Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
49	MJD16	BRI DL Recovery	A BRI data link is back in service. Alarm Data = Cabinet, Slot, Channel(Cx-Syy-czz)
50	MJD17	RAM Error	An error has occurred in the TEPRI or BRI card RAM. Alarm Data = Cabinet, Slot(Cx-Syy)

(Continued)

MMC 853	MAINTENANCE BUSY

## [853] MAINTENANCE BUSY

This MMC is used to place stations, trunks, and common resources equipment in a maintenance busy condition. This can be used to isolate suspected intermittent problem equipment. Stations placed in maintenance busy will behave like a station in DND when called. The calling stations display(if equipped) will show 'MADE BUSY' when called. Stations receiving DID or E & M type calls will receive a DND/No more calls tone.

The station display will still function with station and date.

When the busy station is accessed, it will function like a locked all station. Trunks made busy can not originate calls. Ring down type trunks will still ring the programmed destination. Common resource equipment such as DSP's, CID DSP's and miscellaneous equipment such as page ports, AA ports or voice mail card ports can also be placed in a maintenance busy state.

### MAINTENANCE BUSY OPTIONS

No	Option	Description
0	TRK	Trunks
1	STN	Stations
2	PAGE	Page Ports
3	AA	Auto Attendant card ports
4	DTMFR	DTMF Receiver(4/DSP)
5	CID	CID Receiver(14/DSP)
6	R2MFC	R2MFC Receiver(8/DSP)
7	CONF	GRP #01-24
8	MGI	MGI ports

NOTE

#### DTMFR/CID/R2MFC DSP

Cases of DTMFR, CID or R2MFC DSP selection when DSP is not mounted display will show NONE. If mounted display will show IDLE by default.

## [854] DIAGNOSTIC TIME

Provides a means to set the Diagnostic Time. The system diagnostics tests include memory audits, internal loopback tests on digital trunks, DSP, AA DSP tests. Additional tests include CODEC tests on analog trunk and station cards and tone tests. If the diagnostics cannot complete the tests because of system traffic, the system will abort the test and retry during the next programmed diagnostic time. It is recommended to assign the diagnostic time during non-peak traffic periods.

**[855] SYSTEM OPTIONS**

This MMC provides a means to review the common use hardware that is mounted in the system. System Options show miscellaneous hardware and daughter boards. This enables the technician to review the available hardware without having to dismantle or power down the system to confirm if the hardware is mounted.

This is a READ ONLY MMC.

**SYSTEM OPTIONS**

<OfficeServ 500-L System>

Option	Description
MCP D-BD 1	Shows the Daughter Board #1 of MCP
MCP D-BD 2	Shows the Daughter Board #2 of MCP
MCP D-BD 3	Shows the Daughter Board #3 of MCP
MCP SW	Shows the DIP S/W status of MCP
C1 POWER-B	Shows the second power exist of Cabinet #1
SCP D-BD 1	Shows the Daughter Board #1 of SCP
SCP D-BD 2	Shows the Daughter Board #2 of SCP
SCP D-BD 3	Shows the Daughter Board #3 of SCP
LCP1 ONLINE	Shows the connection status of Cabinet #2 LCP
C2 POWER-B	Shows the second power exist of Cabinet #2
LCP1 D-BD 1	Shows the Daughter Board #1 of Cabinet #2 LCP
LCP1 D-BD 2	Shows the Daughter Board #2 of Cabinet #2 LCP
LCP1 D-BD 3	Shows the Daughter Board #3 of Cabinet #2 LCP
LCP2 ONLINE	Shows the connection status of Cabinet #3 LCP
C3 POWER-B	Shows the second power exist of Cabinet #3
LCP2 D-BD 1	Shows the Daughter Board #1 of Cabinet #3 LCP
LCP2 D-BD 2	Shows the Daughter Board #2 of Cabinet #3 LCP
LCP2 D-BD 3	Shows the Daughter Board #3 of Cabinet #3 LCP
CxSy VPM	Shows the VPM board status of Voice Mail Card.
CxSy SW	Shows the DIP S/W status of TEPRI card.

## [856] TECH PROGRAMMING LOGS

This MMC lists the date, time and entry location of the last eight times that technician programming was accessed. This will allow a technician to determine if there was unauthorized access to system programming and where this access occurred.

The information stored in this log will consist of 2 elements, the date and time it occurred at and the access location.

There are 4 types of access location information as described below:

Type	Description
NNNN	This would be the extension number of a phone that had accessed programming directly.
MODEM	This would indicate that programming was accessed by PCMMC via the integrated V90 modem attached to the IOM board of main cabinet.
LAN	This would indicate that programming was accessed by PCMMC via the LAN connection on the MCP2 card of main cabinet.
SIOx	This would indicate that programming was accessed by PCMMC via one of the SIO connections on the IOM board of the main cabinet where x is the number(2 or 3) of the SIO port that was used.
